Description

Diodes' PI3PCIE3442A is a differential exchange switch featuring pass-through pinout. It supports two full PCI Express[®] lanes operating at 8.0Gbps PCIe[®] 3.0 performance.

With the select control input low, Port A connects to Port B, and Port C connects to port D for an 8-channel differential pass-through. When the select control input is high Port A connects to Port D, and Port B connects to Port C.

Application

Switching 4 lanes of DP1.2 from PC/Notebook/Tablet to Display monitor
