Description

The HybridPACK™ Drive is a very compact six-pack module optimized for hybrid and electric vehicles. The product FS770R08A6P2FB comes with a flat baseplate and bonded cooling structure and is a 750V/770A module derivate within the HybridPACK Drive family. The power module implements the new EDT2 IGBT generation, which is an automotive Micro-Pattern Trench-Field-Stop cell design optimized for electric drive train applications. The chipset has benchmark current density combined with short circuit ruggedness and increased blocking voltage for reliable inverter operation under harsh environmental conditions. The EDT2 IGBTs also show excellent light load power losses, which helps to improve system efficiency over a real driving cycle. The EDT2 IGBT was optimized for applications with switching frequencies in the range of 10 kHz.

The new HybridPACK™ Drive power module family comes with mechanical guiding elements supporting easy assembly processes for customers. Furthermore, the press-fit pins for the signal terminals avoid additional time consuming selective solder processes, which provides cost savings on system level and increases system reliability. The products in the HybridPACK Drive family with flat baseplate FS660R08A6P2FB; PinFin baseplate FS820R08A6P2B as well as the FS770R08A6P2B derivate allow a very cost effective scaling for different inverter power levels at a minimum inverter design effort.
