

### Description

The Si501/2/3/4 CMEMS programmable oscillator series combines standard CMOS + MEMS in a single, monolithic IC to provide high-quality and high-reliability oscillators. Each device is specified for guaranteed performance across voltage, process, temperature, shock, vibration and aging for 10 years. More information on CMEMS available at [www.silabs.com/cmems](http://www.silabs.com/cmems).

**Applications:** General purpose microcontrollers, industrial control, IP cameras, surveillance systems, metering, home and office automation, security systems, sleep clocking, 10/100 Ethernet/EtherCAT, SPI, SAS3.0 / SATA3.0, PCIe ref clock, NVMe, HDD, SSD, hybrid storage, DDR3/3L, USB2.0, USB OTG/2.0, M2M, HDMI

**Not recommended:** Wi-Fi, Bluetooth, USB 3.0, Gigabit Ethernet

### Features

- Any frequency oscillator from 32 kHz to 100 MHz
  - Contact Silicon Labs Marketing for frequencies above 100 MHz
- Frequency stability:  $\pm 20/\pm 30/\pm 50$  ppm including 10-year aging
  - 20 to +70 °C: Extended Commercial
  - 40 to +85 °C: Industrial
- Highly configurable: low power vs. low jitter, frequency,  $F_{STAB}$ ,  $T_R/T_F$ ,  $V_{DD}$ , OE/FS functionality (see ordering guide below)
- In-circuit programmable via C1D 1-pin interface (Si504)
- Seamless  $V_{DD}$  from +1.71 to +3.63 V
- Low period jitter mode / low power mode
- Glitchless start and stop
- RoHS compliant, Pb-free

### Product Selector Guide

| Part Number | Description   | Control  |
|-------------|---|--|
| Si501       | Single frequency  | OE   |
| Si502       | Dual frequency  | FS/OE  |
| Si503       | Quad frequency  | FS   |
| Si504       | Programmable for any supported frequency or configuration | C1D 1-pin interface (see Si504 data sheet for details) |

### Pin-out

(top view)

### Pin Description

| Pin Number | Description  |
|------------|--|
| 1          | FS = Frequency Select<br>OE = Output Enable<br>C1D = Single wire interface |
| 2          | GND = Ground   |
| 3          | CLK = Clock out  |
| 4          | VDD = Power Supply   |

### Ordering Guide

|   | VDD     | TYP $T_R/T_F$       | Jitter vs Power |
|---|---------|---------------------|-----------------|
| A | 1.7-3.6 | 0.7 ns <sup>1</sup> | Low Power       |
| B | 3.3V    | 1.3 ns <sup>2</sup> |                 |
| C | 2.5V    | 1.3 ns <sup>2</sup> |                 |
| D | 1.8V    | 1.3 ns <sup>2</sup> |                 |
| E | 1.7-3.6 | 3 ns <sup>3</sup>   |                 |
| F | 1.7-3.6 | 5 ns <sup>3</sup>   |                 |
| G | 1.7-3.6 | 8 ns <sup>3</sup>   |                 |
| H | 1.7-3.6 | 0.7 ns <sup>1</sup> | Low Jitter      |
| J | 3.3V    | 1.3 ns <sup>2</sup> |                 |
| K | 2.5V    | 1.3 ns <sup>2</sup> |                 |
| L | 1.8V    | 1.3 ns <sup>2</sup> |                 |

| D | 2 x 2.5 mm              |

50X - - - - - A - R

#### Ordering Guide Notes:

- Series termination resistor ( $R_S$  – see Apps Circuits section) is recommended for this configuration.
- Series termination resistor ( $R_S$ ) is not needed for this configuration. Output impedance is 50Ω for the indicated supply condition.
- Series termination resistor ( $R_S$ ) is not needed for this configuration. Reduced EMI setting.
- 3.2 x 5 mm package is delivered as 3.2 x 4 mm and accommodates the industry-standard 3.2 x 5 mm footprint.
- Select option to support maximum anticipated frequency needed.
- The Si502 OE pin has three (3) states: OE High = Freq 1; OE Weak High = Freq 2; OE Low is configurable.

### Selected Electrical Specifications

$V_{DD} = +1.71\text{ V to }+3.63\text{ V}$ ,  $T_A = -40\text{ to }85\text{ °C}$  unless stated otherwise.

- Si501 supports OE/mode functionality. Si502 supports OE/mode and FS functionality. Si503 supports only FS functionality. See data sheet functional description section for more information.
- Frequency stability includes initial tolerance, solder shift, operating temp range, rated power supply voltage change, load change, 10-year aging, shock, and vibration.
- $C_L = 15\text{ pF}$ ,  $T_R/T_F$  (20% to 80%), 3.3 V unless otherwise stated. See datasheet for additional  $T_R/T_F$  options.
- Recommended series termination resistor ( $R_S$ ) = 24.9  $\Omega$  for  $Z_0=50\ \Omega$ .
- Integrated phase jitter exceeds some high-performance data communications system requirements. See AN783 for more information.

### Absolute Maximum Ratings<sup>1</sup>

| Parameter                              | Symbol     | Condition | Rating                       | Unit               |
|--|------------|-----------|------------------------------|--------------------|
| Storage Temperature                    | $T_S$      |           | -55 to 125                   | $^{\circ}\text{C}$ |
| Supply Voltage                         | $V_{DD}$   |           | -0.5 to 3.8                  | $^{\circ}\text{C}$ |
| Input Voltage                          | $V_{IN}$   |           | $0.5\text{ to }V_{DD} + 0.3$ | V                  |
| ESD HBM (JESD22-A114)                  | HBM        |           | 2000                         | V                  |
| ESD CDM                                | CDM        |           | 500                          | V                  |
| Solder Temp <sup>2</sup>               | $T_{PEAK}$ |           | 260                          | $^{\circ}\text{C}$ |

| Max Junction Temp                      | $T_J$      |           | 125                          | $^{\circ}\text{C}$ |

- Stresses beyond those listed in this table may cause permanent damage to the device. Functional operation specification compliance is not implied at these conditions. Exposure to maximum rating conditions for extended periods may affect device reliability.
- The device is compliant with JEDEC J-STD-020.

### Environmental Compliance and Package Information

| Parameter                 | Test Condition                        |

|-------------------|---------------|-------------------------|-------|------|
| Thermal Impedance | $\Theta_{JA}$ | 3.2 x 5 mm, still air   | 187   | °C/W |
|                   |               | 2.5 x 3.2 mm, still air | 239   |      |
|                   |               | 2 x 2.5 mm, still air   | 241   |      |

### Clock Timing Characteristics

$V_{DD} = +1.71\text{ V to }+3.63\text{ V}$ ,  $T_A = -40\text{ to }85\text{ °C}$  unless stated otherwise.

| Parameter                          | Symbol          | Test Condition/Comment                     | Min | Typ | Max                       | Unit |
|------------------------------------|-----------------|--|-----|-----|---------------------------|------|
| Startup Time <sup>1</sup>          | $T_{SU}$        | From $V_{DD}$ crossing 1.71 to first clock | —   | 2.5 | 4                         | ms   |
| Resume Time <sup>2,3</sup>         | $T_{RUN}$       | From Stop mode                             | —   | —   | $1.5 \times T_{CLK} + 35$ | ns   |
|                                    |                 | From Sleep mode                            | —   | 2.5 | 5                         | ms   |
|                                    |                 | From Doze mode                             | —   | —   | 2.55                      |      |
| Output Disable Time <sup>2,3</sup> | $T_D$           | To Stop                                    | —   | —   | $1.5 \times T_{CLK} + 35$ | ns   |
|                                    |                 | To Sleep/Doze                              | —   | —   | 225                       | μs   |
| Frequency Update Time <sup>2</sup> | $T_{NEW\_FREQ}$ | To New Frequency                           | —   | —   | 5                         | ms   |

1. Hold FS/OE high (strong or weak) during powerup for fastest time to clock.
2. Si501 and Si502 only. Si503 has frequency select (FS) only and does not support Stop, Doze or Sleep.
3.  $T_{CLK} = \text{clock period} = 1 / F_{CLK}$ .

### AC Waveforms

Si501/2/3 Power On Time

Si501/2 AC Waveform

Si503 AC Waveform

## Applications Circuits

### Si501/2 Apps Circuit w/ Optional Series Resistor

### Si503 Apps Circuit w/ Configurable Options

Notes:

1. Dotted line boxes show optional components depending on configuration options. See data sheet for additional information and for applications using a microcontroller. Data sheet is available at [www.silabs.com/cmems](http://www.silabs.com/cmems).
2. Recommended series termination resistor (R<sub>S</sub>) = 24.9 Ω for Z<sub>0</sub> = 50 Ω.

### Si502 FS/OE States and Resistor Values

| FS/OE State | R <sub>UP</sub>                  | Clock Output |
|-------------|----------------------------------|--------------|
| Strong High | 0 Ω ≤ R <sub>UP</sub> ≤ 1 kΩ     | Frequency 1  |
| Weak High   | 20 kΩ ≤ R <sub>UP</sub> ≤ 200 kΩ | Frequency 2  |
| Low         | —                                | Hi-Z         |

### Si503 FS States and Resistor Values

| FS/OE State | R <sub>UP</sub>                  | R <sub>DOWN</sub>                  | Clock Output |
|-------------|----------------------------------|------------------------------------|--------------|
| Strong High | 0 Ω ≤ R <sub>UP</sub> ≤ 1 kΩ     | No pop                             | Frequency 1  |
| Weak High   | 20 kΩ ≤ R <sub>UP</sub> ≤ 200 kΩ | No pop                             | Frequency 2  |
| Weak Low    | No pop                           | 20 kΩ ≤ R <sub>DOWN</sub> ≤ 200 kΩ | Frequency 3  |
| Low         | No pop                           | 0 Ω ≤ R <sub>DOWN</sub> ≤ 1 kΩ     | Frequency 4  |

Notes for both FS/OE tables above:

1. If the internal pull-up resistor order option is NOT selected, an MCU internal pull-up resistor or an external pull-up resistor should be used. See data sheet for more information.
2. The parallel combination of all pull-up resistors on the FS/OE pin including the optional internal pull-up resistor must be > 20 kΩ to select Weak High.
3. If the Si50x internal pull-up resistor is enabled with no other external OE connections, the OE state will be detected as "Weak High", selecting Frequency 2 by default.

## Package Dimensions and Landing Patterns

### 3.2 mm x 5 mm 4-pin DFN Dimensions

### 3.2 mm x 5 mm 4-pin DFN Landing Pattern

Note: The 3.2 x 5 mm package is delivered as a 3.2 x 4 mm package and is drop-in compatible to industry-standard 3.2 x 5 landing patterns.

### 2.5 mm x 3.2 mm 4-pin DFN Dimensions

### 2.5 mm x 3.2 mm 4-pin DFN Landing Pattern

### 2 mm x 2.5 mm 4-pin DFN Dimensions

### 2 mm x 2.5 mm 4-pin DFN Landing Pattern

## Package Top Marks and Explanations

### Patent Notice

Silicon Labs invests in research and development to help our customers differentiate in the market with innovative low-power, small size, analog-intensive mixed-signal solutions. Silicon Labs' extensive patent portfolio is a testament to our unique approach and world-class engineering team.

The information in this document is believed to be accurate in all respects at the time of publication but is subject to change without notice. Silicon Laboratories assumes no responsibility for errors and omissions, and disclaims responsibility for any consequences resulting from the use of information included herein. Additionally, Silicon Laboratories assumes no responsibility for the functioning of undescribed features or parameters. Silicon Laboratories reserves the right to make changes without further notice. Silicon Laboratories makes no warranty, representation or guarantee regarding the suitability of its products for any particular purpose, nor does Silicon Laboratories assume any liability arising out of the application or use of any product or circuit, and specifically disclaims any and all liability, including without limitation consequential or incidental damages. Silicon Laboratories products are not designed, intended, or authorized for use in applications intended to support or sustain life, or for any other application in which the failure of the Silicon Laboratories product could create a situation where personal injury or death may occur. Should Buyer purchase or use Silicon Laboratories products for any such unintended or unauthorized application, Buyer shall indemnify and hold Silicon Laboratories harmless against all claims and damages.

Компания «Life Electronics» занимается поставками электронных компонентов импортного и отечественного производства от производителей и со складов крупных дистрибьюторов Европы, Америки и Азии.

С конца 2013 года компания активно расширяет линейку поставок компонентов по направлению коаксиальный кабель, кварцевые генераторы и конденсаторы (керамические, пленочные, электролитические), за счёт заключения дистрибьюторских договоров

Мы предлагаем:

- Конкурентоспособные цены и скидки постоянным клиентам.
- Специальные условия для постоянных клиентов.
- Подбор аналогов.
- Поставку компонентов в любых объемах, удовлетворяющих вашим потребностям.
- Приемлемые сроки поставки, возможна ускоренная поставка.
- Доставку товара в любую точку России и стран СНГ.
- Комплексную поставку.
- Работу по проектам и поставку образцов.
- Формирование склада под заказчика.
- Сертификаты соответствия на поставляемую продукцию (по желанию клиента).
- Тестирование поставляемой продукции.
- Поставку компонентов, требующих военную и космическую приемку.
- Входной контроль качества.
- Наличие сертификата ISO.

В составе нашей компании организован Конструкторский отдел, призванный помогать разработчикам, и инженерам.

Конструкторский отдел помогает осуществить:

- Регистрацию проекта у производителя компонентов.
- Техническую поддержку проекта.
- Защиту от снятия компонента с производства.
- Оценку стоимости проекта по компонентам.
- Изготовление тестовой платы монтаж и пусконаладочные работы.
