

MAXIM

MAX1649 Evaluation Kit

General Description

The MAX1649 evaluation kit (EV kit) provides a regulated 5V output voltage from a 5.5V to 16.5V source. The circuit is configured to deliver up to 1.5A of output current using all surface-mount components. The MAX1649's low quiescent current and unique current-limited PFM control scheme provide high efficiency over a wide range of load currents.

The MAX1649 EV kit can also be used to evaluate the MAX1651 (3.3V output), MAX649, MAX651, and MAX652. However, the MAX1649/MAX1651 are improved versions of the MAX649/MAX651, and are recommended for new designs.

Component List

DESIGNATION	QTY	DESCRIPTION
C1, C6	2	68 μ F, 20V \pm 20% tantalum capacitors (E-case) AVX TPSE686M020R0150
C2	1	330 μ F, 10V \pm 10% tantalum capacitor (E-case) AVX TPSE337K010R0060
C3, C4	2	0.1 μ F \pm 10% ceramic capacitors (0805) Panasonic ECJ-3VB1H104K
C5	0	Not installed, capacitor (1206)
C7	0	Not installed, capacitor (D-case)
D1	1	Schottky diode Nihon NSQ03A03L
JU1	1	3-pin header
JU3	0	Not installed, shorted by PC trace
L1	1	47 μ H inductor Sumida CDRH125NP-470MC
P1	1	p-channel MOSFET (8-pin SO-8) International Rectifier IRF7416PBF Fairchild NDS8435A_NL
R1	1	0.050 Ω \pm 1%, 0.5W resistor (2010) Dale WSL2010R0500FEA IRC LRC-LR2010LF-01-R050-F
R2	0	Not installed, resistor (1206)
R3	0	Not installed, resistor (1206)—shorted by PC trace
U1	1	MAX1649CSA+ (8-pin SO-8)
—	1	Shunt
—	1	PCB: MAX1649 Evaluation Kit+

Features

- ◆ +5.5V to +16.5V Input Supply Range
- ◆ Over 90% Efficiency for 10mA to 1.5A Loads
- ◆ 100 μ A (max) Quiescent Supply Current
- ◆ Fixed 5V or Optional Adjustable Output Voltage
- ◆ 1.5A Output Current Capability
- ◆ Fully Assembled and Tested

Note: Indicate that you are using the MAX1649 when contacting these component suppliers.

Quick Start

The MAX1649 EV kit is fully assembled and tested. Follow the steps below to verify board operation. **Do not turn on the power supply until all connections are completed.**

- 1) Connect a +5.5V to +16.5V power supply to the pad marked VIN.
- 2) Connect ground to the GND pad.
- 3) Connect a voltmeter and load (if any) to the VOUT pad.
- 4) For normal operation, place the shunt across pins 1 and 2 of jumper JU1.
- 5) Turn on the power supply and verify that the output voltage is 5V.

MAX1649 Evaluation Kit

Detailed Description

Shutdown Control

The MAX1649 provides a SHDN pin to disable the output. Table 1 lists the options available for shutdown control jumper JU1. An external controller can be used by removing the shunt on JU1 completely and connecting the external controller to the pad labeled SHDN. SHDN is a TTL/CMOS logic-level input.

Output Voltage Adjustment

The output voltage can be adjusted with minor modifications to the EV kit board. First, select output voltage-divider resistors R2 and R3 (refer to the *Setting the Output Voltage* section of the MAX1649 data sheet). Second, open jumper JU3 and resistor R3 by cutting the thin PCB trace between their pads. Finally, install R2 and R3. The standard output filter capacitor is rated at 10V. Use a higher-rated capacitor if necessary.

When using the MAX1651 or when adjusting the output of either device, an input voltage below 5.5V is accept-

able. However, the input voltage must be high enough to avoid dropout (refer to the *Typical Operating Characteristics* of the MAX1649/MAX1651 data sheet).

Evaluating the MAX649/MAX651/MAX652

The MAX1649 EV kit can also be used to evaluate the MAX649/MAX651/MAX652. In addition to replacing the MAX1649 with a MAX649, change resistor R1 to 0.1Ω. Contact Maxim for free samples of the MAX649CSA, MAX651CSA, or MAX652CSA. Note that the MAX1649/MAX1651 are recommended over the MAX649/MAX651/MAX652 for new designs.

Table 1. Jumper JU1 Functions

SHUNT LOCATION	SHDN PIN	MAX1649 OUTPUT
1 and 2	Connected to GND	MAX1649 enabled, $V_{OUT} = 5V$
2 and 3	Connected to VIN	Shutdown mode, $V_{OUT} = 0V$

MAXIM is a registered trademark of Maxim Integrated Products, Inc.

Компания «Life Electronics» занимается поставками электронных компонентов импортного и отечественного производства от производителей и со складов крупных дистрибьюторов Европы, Америки и Азии.

С конца 2013 года компания активно расширяет линейку поставок компонентов по направлению коаксиальный кабель, кварцевые генераторы и конденсаторы (керамические, пленочные, электролитические), за счёт заключения дистрибьюторских договоров

Мы предлагаем:

- Конкуренспособные цены и скидки постоянным клиентам.
- Специальные условия для постоянных клиентов.
- Подбор аналогов.
- Поставку компонентов в любых объемах, удовлетворяющих вашим потребностям.
- Приемлемые сроки поставки, возможна ускоренная поставка.
- Доставку товара в любую точку России и стран СНГ.
- Комплексную поставку.
- Работу по проектам и поставку образцов.
- Формирование склада под заказчика.
- Сертификаты соответствия на поставляемую продукцию (по желанию клиента).
- Тестирование поставляемой продукции.
- Поставку компонентов, требующих военную и космическую приемку.
- Входной контроль качества.
- Наличие сертификата ISO.

В составе нашей компании организован Конструкторский отдел, призванный помогать разработчикам, и инженерам.

Конструкторский отдел помогает осуществить:

- Регистрацию проекта у производителя компонентов.
- Техническую поддержку проекта.
- Защиту от снятия компонента с производства.
- Оценку стоимости проекта по компонентам.
- Изготовление тестовой платы монтаж и пусконаладочные работы.
