

Product Description

RFMD's SBA4086Z is a high performance InGaP/GaAs Heterojunction Bipolar Transistor MMIC Amplifier. A Darlington configuration designed with InGaP process technology provides broadband performance up to 5GHz with excellent thermal performance. The heterojunction increases breakdown voltage and minimizes leakage current between junctions. Cancellation of emitter junction non-linearities results in higher suppression of intermodulation products. Only a single positive supply voltage, DC-blocking capacitors, a bias resistor, and an optional RF choke are required for operation.

Absolute Maximum Ratings

Parameter	Rating	Unit
Device Current (I_D)	130	mA
Device Voltage (V_D)	6	V
RF Input Power	+17	dBm
Junction Temp (T_J)	+150	°C

Operation of this device beyond any one of these limits may cause permanent damage. For reliable continuous operation, the device voltage and current must not exceed the maximum operating values specified in the table on page one.

Bias Conditions should also satisfy the following expression:

$$I_D V_D < (T_J - T_L) / R_{TH, j-l} \text{ and } T_L = T_{LEAD}$$

Caution! ESD sensitive device.

Exceeding any one or a combination of the Absolute Maximum Rating conditions may cause permanent damage to the device. Extended application of Absolute Maximum Rating conditions to the device may reduce device reliability. Specified typical performance or functional operation of the device under Absolute Maximum Rating conditions is not implied.

Basic Application Circuit

Evaluation Board Layout

Mounting Instructions:

- 1. Use a large ground pad area under device pins 2 and 4 with many plated through-holes as shown.
- 2. We recommend 1 or 2 ounce copper. Measurements for this data sheet were made on a 31mil thick FR-4 board with 1 ounce copper on both sides.

C _D	100pF	68pF	22pF	22pF	15pF
L _C	68nH	33nH	22nH	18nH	15nH

Recommended Bias Resistor Values for I_D=80mA, R_{BIAS}=(V_S-V_D)/I_D

Supply Voltage (V _S)	7.5V	8V	10V	12V
R _{BIAS}	33Ω	39Ω	68Ω	91Ω

Note: R_{BIAS} provides DC bias stability over temperature.

Pin	Function	Description
1	RF IN	RF input pin. This pin requires the use of an external DC-blocking capacitor chosen for the frequency of operation.
2, 4	GND	Connection to ground. Use via holes for best performance to reduce lead inductance as close to ground leads as possible.
3	RF OUT/BIAS	RF output and bias pin. DC voltage is present on this pin, therefore a DC-blocking capacitor is necessary for proper operation.
