

**TISP8200HDM BUFFERED P-GATE SCR DUAL
TISP8201HDM BUFFERED N-GATE SCR DUAL**

**COMPLEMENTARY BUFFERED-GATE SCRS
FOR DUAL POLARITY SLIC OVERVOLTAGE PROTECTION**

TISP820xHDM Overvoltage Protectors

High Performance Protection for SLICs with +ve & -ve Battery Supplies

TISP8200HDM Negative Overvoltage Protector
 – Wide -20 to -110 V Programming Range
 – Low +15 mA Max. Gate Triggering Current
 – High -150 mA Min. Holding Current

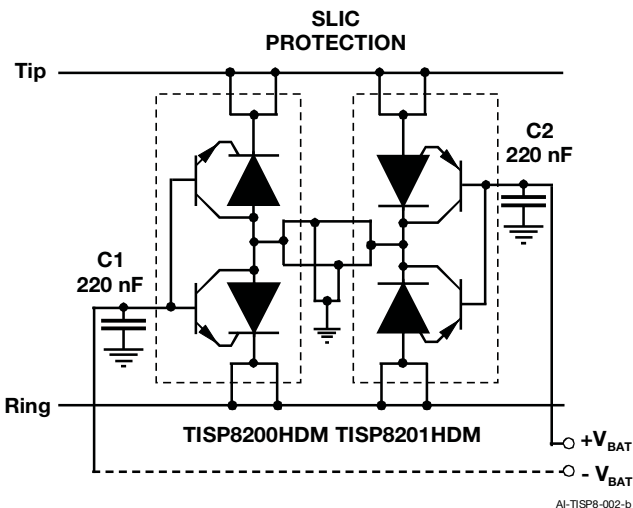

TISP8201HDM Positive Overvoltage Protector
 – Wide +20 to +110 V Programming Range
 – Low -15 mA Max. Gate Triggering Current
 – +20 mA Min. Holding Current

Rated for International Surge Wave Shapes

Wave Shape	Standard	I _{PPSM} A
2/10	GR-1089-CORE	500
10/700	ITU-T K.20/21/45	150
10/1000	GR-1089-CORE	100

TISP820xHDM Overvoltage Protectors

BOURNS®

Description

The TISP8200HDM/TISP8201HDM combination has been designed to protect dual polarity supply rail monolithic SLICs (Subscriber Line Interface Circuits) against overvoltages on the telephone line caused by lightning, a.c. power contact and induction. Protection against negative overvoltages is given by the TISP8200HDM. Protection against positive overvoltages is given by the TISP8201HDM. Both parts are in 8-SOIC (210 mil) surface mount packages.

The TISP8200HDM has an array of two buffered P-gate SCRs with a common anode connection. Each SCR cathode and gate has a separate terminal connection. The NPN buffer transistors reduce the gate supply current. In use, the cathodes of the TISP8200HDM SCRs are connected to the two conductors of the POTS line. The gates are connected to the appropriate negative voltage battery feed of the SLIC driving the line conductor pair, so that the TISP8200HDM protection voltage tracks the SLIC negative supply voltage. The anode of the TISP8200HDM is connected to the SLIC common. Negative overvoltages are initially clipped close to the SLIC negative supply by emitter follower action of the NPN buffer transistor. If sufficient clipping current flows, the SCR will regenerate and switch into a low voltage on-state condition. As the overvoltage subsides the high holding current of the SCR helps prevent d.c. latchup.

The TISP8201HDM has an array of two buffered N-gate SCRs with a common cathode connection. Each SCR anode and gate has a separate terminal connection. The PNP buffer transistors reduce the gate supply current. In use, the anodes of the TISP8201HDM SCRs are connected to the two conductors of the POTS line. The gates are connected to the appropriate positive voltage battery feed of the SLIC driving that line pair, so that the TISP8201HDM protection voltage tracks the SLIC positive supply voltage. The cathode of the TISP8201HDM is connected to the SLIC common. Positive overvoltages are initially clipped close to the SLIC positive supply by emitter follower action of the PNP buffer transistor. If sufficient clipping current flows the SCR will regenerate and switch into a low voltage on-state condition. As the overvoltage subsides the SLIC pulls the conductor voltage down to its normal negative value and this commutates the conducting SCR into a reverse biased condition.

How to Order

Device	Package	Carrier	Order As	Marking Code	Standard Quantity
TISP8200HDM	8-SOIC (210 mil)	Embossed Tape Reeled	TISP8200HDMR-S	8200H	2000
TISP8201HDM			TISP8201HDMR-S	8201H	

TISP8200HDM Absolute Maximum Ratings, $T_A = 25^\circ\text{C}$ (Unless Otherwise Noted)

Rating	Symbol	Value	Unit
Repetitive peak off-state voltage, $V_{GK} = 0$	V_{DRM}	-120	V
Repetitive peak reverse voltage, $V_{GA} = -70\text{ V}$	V_{RRM}	120	
Non-repetitive peak impulse current (see Notes 1, 2 and 3) 2/10 μs (Telcordia GR-1089-CORE, 2/10 μs voltage wave shape) 5/310 μs (ITU-T K.44, 10/700 μs voltage wave shape used in K.20/21/45) 10/1000 μs (Telcordia GR-1089-CORE, 10/1000 μs voltage wave shape)	I_{PPSM}	-500	A
		-150	
		-100	
Non-repetitive peak on-state current, 50/60 Hz (see Notes 1, 2, 3 and 4) 10 ms 1 s 7 s 900 s	I_{TSM}	60	A
		14	
		7	
		3.5	
Junction temperature	T_J	-55 to +150	$^\circ\text{C}$
Storage temperature range	T_{stg}	-65 to +150	$^\circ\text{C}$

- NOTES: 1. Initially the device must be in thermal equilibrium with $T_J = 25^\circ\text{C}$. The surge may be repeated after the device returns to its initial conditions.
2. These non-repetitive rated currents are peak values. The rated current values may be applied to any cathode-anode terminal pair.
3. Rated currents only apply if pins 1 & 8 (K1, Tip) are connected together, pins 4 & 5 (K2, Ring) are connected together and pins 6 & 7 (A, Ground) are connected together.
4. These non-repetitive rated terminal currents are for the TISP8200HDM and TISP8201HDM together. Device (A)-terminal positive current values are conducted by the TISP8201HDM and (K)-terminal negative current values by the TISP8200HDM.

Reliable Electronic Solutions

Компания «Life Electronics» занимается поставками электронных компонентов импортного и отечественного производства от производителей и со складов крупных дистрибьюторов Европы, Америки и Азии.

С конца 2013 года компания активно расширяет линейку поставок компонентов по направлению коаксиальный кабель, кварцевые генераторы и конденсаторы (керамические, пленочные, электролитические), за счёт заключения дистрибьюторских договоров

Мы предлагаем:

- Конкурентоспособные цены и скидки постоянным клиентам.
- Специальные условия для постоянных клиентов.
- Подбор аналогов.
- Поставку компонентов в любых объемах, удовлетворяющих вашим потребностям.
- Приемлемые сроки поставки, возможна ускоренная поставка.
- Доставку товара в любую точку России и стран СНГ.
- Комплексную поставку.
- Работу по проектам и поставку образцов.
- Формирование склада под заказчика.
- Сертификаты соответствия на поставляемую продукцию (по желанию клиента).
- Тестирование поставляемой продукции.
- Поставку компонентов, требующих военную и космическую приемку.
- Входной контроль качества.
- Наличие сертификата ISO.

В составе нашей компании организован Конструкторский отдел, призванный помогать разработчикам, и инженерам.

Конструкторский отдел помогает осуществить:

- Регистрацию проекта у производителя компонентов.
- Техническую поддержку проекта.
- Защиту от снятия компонента с производства.
- Оценку стоимости проекта по компонентам.
- Изготовление тестовой платы монтаж и пусконаладочные работы.
