Highlights

■ Innovative Cooling Mechanism

The ADLINK PXIS-2719A features an innovative design for heat dissipation. The cooling fans are placed in the rear section of the chassis where cool air is drawn in through apertures on the bottom and exhausted through the back. This new design provides uniform airflow for each PXI slot and exceptional cooling capability. When the chassis is installed, the design minimizes intake of hot air from the rear where other devices exhaust, while maintaining a steady temperature inside the chassis.

■ Intelligent Chassis Management

The PXIS-2719A has a built-in control board monitors and manages chassis status, including internal temperature, fan speed, and voltages. Using the RS-232 monitoring port, the chassis status information can be exported to another computer for remote management. The control board can also accept commands from the remote system to allow remote power on/off and fan speed control of the PXIS-2719A chassis.

Remote Monitoring Port

■ Flexible Rack-mount Design

An optional rack-mount kit provides flexible installation of the PXIS-2719A. By adjusting the position of rack-mount bracket, the PXIS-2719A can be recessed in a cabinet rack up to 10 centimeters to accommodate external mechanical parts on the front side, such as complicated connectors/wires and mass interconnect modules.
