

## Dual Monolithic Buck Regulator with Power-On Reset and Watchdog Timer

### DESCRIPTION

Demonstration circuit 1359 is a Dual Monolithic Buck Regulator with Power-On Reset and Watchdog Timer featuring the LT3640. The board operates from inputs up to 35V and withstands transients up to 55V. The outputs are 3.3V, 0.8A and 1.2V, 1A. At light loads, both regulators operate in low ripple Burst Mode® to maintain high efficiency and low output ripple. Users can populate R13 on the EN/UVLO pin to provide a programmable under voltage lockout. Both channels have cycle-by-cycle current limit, providing protection against shorted outputs.

The power-on reset and watchdog timer periods are independently adjustable using external capacitors. Tight accuracy specifications and glitch immunity ensure reliable operation of the circuit. Watchdog can be enabled or disabled by JP1.

The circuit can be synchronized to an external clock connected to the SYNC terminal. If the SYNC function is used, the  $R_t$  resistor (R9) should be chosen to set the LT3640 internal switching frequency at least 20% below the lowest synchronization input frequency.

The LT3640 datasheet gives complete descriptions of the part, operation and application information. The datasheet must be read in conjunction with this quick start guide for working on or modifying the demo circuit 1359.

## QUICK START PROCEDURE

Demonstration circuit 1359 is easy to set up to evaluate the performance of the LT3640. Refer to Figure 1 for proper measurement equipment setup and follow the procedure below:

1. Place Jumper JP1 in the following position:

OFF: Watchdog Disabled

ON: Watchdog Enabled

2. With power off, connect the input power supply to VIN and GND.
3. With power off, connect loads from VOUT1 to GND and VOUT2 to GND.
4. Turn on the power at the input.

**NOTE.** Make sure that the input voltage does not exceed 35V.

5. Check for the proper output voltages:

VOUT1 = 3.3V, VOUT2 = 1.2V

**NOTE.** If there is no output, temporarily disconnect the load to make sure that the load is not set too high or is shorted.

6. Once the proper output voltages are established, adjust the loads within the operating range and observe the output voltage regulation, ripple voltage, efficiency and other parameters.
7. To test the watchdog timer, connect a clock input to the WDI terminal. Observe the output at the  $\overline{\text{WDO}}$  terminal while the clock parameters are adjusted.
8. To test Power-On Reset, observe output at the RESET terminals:  $\overline{\text{RST1}}$  and  $\overline{\text{RST2}}$ .

**NOTE: UNLESS OTHERWISE SPECIFIED**

1. ALL RESISTORS ARE IN Ω.
2. ALL CAPACITORS ARE IN pF.
3. INSTALL SHUNTS AS SHOWN.

Компания «Life Electronics» занимается поставками электронных компонентов импортного и отечественного производства от производителей и со складов крупных дистрибьюторов Европы, Америки и Азии.

С конца 2013 года компания активно расширяет линейку поставок компонентов по направлению коаксиальный кабель, кварцевые генераторы и конденсаторы (керамические, пленочные, электролитические), за счёт заключения дистрибьюторских договоров

Мы предлагаем:

- Конкурентоспособные цены и скидки постоянным клиентам.
- Специальные условия для постоянных клиентов.
- Подбор аналогов.
- Поставку компонентов в любых объемах, удовлетворяющих вашим потребностям.
- Приемлемые сроки поставки, возможна ускоренная поставка.
- Доставку товара в любую точку России и стран СНГ.
- Комплексную поставку.
- Работу по проектам и поставку образцов.
- Формирование склада под заказчика.
- Сертификаты соответствия на поставляемую продукцию (по желанию клиента).
- Тестирование поставляемой продукции.
- Поставку компонентов, требующих военную и космическую приемку.
- Входной контроль качества.
- Наличие сертификата ISO.

В составе нашей компании организован Конструкторский отдел, призванный помогать разработчикам, и инженерам.

Конструкторский отдел помогает осуществить:

- Регистрацию проекта у производителя компонентов.
- Техническую поддержку проекта.
- Защиту от снятия компонента с производства.
- Оценку стоимости проекта по компонентам.
- Изготовление тестовой платы монтаж и пусконаладочные работы.
