### Functional Diagram

### General Description

The HMC1113LP5E is a compact GaAs MMIC I/Q downconverter in a leadless 5 x 5 mm low stress injection molded plastic surface mount package. This device provides a small signal conversion gain of 12 dB with a noise figure of 1.8 dB and 25 dBc of image rejection. The HMC1113LP5E utilizes an LNA followed by an image reject mixer which is driven by an LO buffer amplifier. The image reject mixer eliminates the need for a filter following the LNA, and removes thermal noise at the image frequency. I/Q mixer outputs are provided and an external 90° hybrid is needed to select the required sideband. The HMC1113LP5E is a much smaller alternative to hybrid style image reject mixer downconverter assemblies, and it eliminates the need for wire bonding by allowing the use of surface mount manufacturing techniques.

### Pin Descriptions

Pin Number	Function	Description	Interface Schematic
1, 5, 7, 8, 9, 13, 14, 15, 16, 22, 23, 24, 25, 26, 27, 30, 31, 32	N/C	These pins are not connected internally. However, all data shown herein was measured with these pins connected to RF/DC ground externally.	
2, 4, 10, 12, 17, 19, 21	GND	These pins and the exposed ground paddle must be connected to RF/DC ground.	
3	RF	This pin is AC coupled and matched to 50 Ohms.	
6	VD3	Power Supply for LO amplifier.	
11	LO	This pin is AC coupled and matched to 50 Ohms.	
18	IF2	Differential IF input pins. For applications not requiring operation to DC, an off chip DC blocking capacitor should be used. For operation to DC this pin must not source/sink more than 3 mA of current or part non function and possible part failure will result.	
20	IF1		
28, 29	VD2, VD1	Voltage bias for LNA.

[1] Circuit Board Material: Rogers 4350 or Arlon 25FR

The circuit board used in the application should use RF circuit design techniques. Signal lines should have 50 Ohm impedance while the package ground leads and exposed paddle should be connected directly to the ground plane similar to that shown. A sufficient number of via holes should be used to connect the top and bottom ground planes. The evaluation circuit board shown is available from Hittite upon request.
