

Product Overview

The QPF7200 provides a complete integrated solution in a single placement front end module (FEM) for Wi-Fi 802.11b/g/n systems. The full integration minimizes layout area in the customer's application and greatly reduces the design complexity and the number of external components. Performance is focused on conserving power consumption while maintaining the highest linear output power and leading edge throughput across all Wi-Fi channels without the need to reduce transmit power to meet the FCC regulatory limits. The QPF7200 integrates a 2.4GHz power amplifier (PA) with power detector, multiple switches, LNA with bypass mode, transmit bandedge BAW filter for flat power transmission, and receive BAW filter for wireless coexistence. The QPF7200 integrated filtering also includes 2nd and 3rd harmonics and 5GHz rejection for dual-band dual-concurrent operation. The device is provided in a 8.0mm x 5.5mm x 1mm max laminate package. This module meets or exceeds the RF front end needs of IEEE 802.11b/g/n Wi-Fi RF systems.
