

2.4-2.5 & 5.1-5.9 GHz 8 dBi WALL MOUNTED DIRECTIONAL MIMO ANTENNA

The PDM24519 antenna is a dual-band 3-port directional antenna for use in 802.11n MIMO applications. Equipped with two Vertically polarized ports and a single Horizontally polarized port, the antenna has been designed to take advantage of both polarization and spatial separation to enhance coverage areas populated with obstructions. Housed in a compact, low-profile Polycarbonate Radome and equipped with an articulating arm the antenna can be wall mounted and oriented to take full advantage of the antenna's directionality.

The radiation patterns are uniform and symmetrical, providing high levels of signal density into defined coverage zones. This antenna will greatly enhance the performance of 802.11n systems where physical obstructions are anticipated. The dual band frequency coverage means that a single type of antenna can be deployed with any MIMO radio in the 2.4-2.5 GHz and 5.1-5.9 GHz bands.

FEATURES

- Both Vertically and Horizontally polarized radiating elements in a single solution
- Compact low profile housing
