1 Description

In applications as the interface between the PLC and sensors (e.g., proximity switches, limit switches or auxiliary contacts), as a rule only one N/O contact is required. In this case, the **PLC-RS.../SEN** input module can be used, which is specially optimized for these applications and consists of a 6.2 mm basic terminal block and plug-in miniature relay with screw or spring-cage connection.

1.1 No Need for Power Terminal Blocks

Unlike conventional input relays, all sensor connections, including the supply voltage for the sensors and switches, are connected directly to the PLC INTERFACE module. The PLC-RS.../SEN can thus be used directly as a terminal strip with integrated interface function for the incoming sensor cables, without the need for additional modular terminal blocks (see also INTERFACE catalog).

- Elimination of the need for modular terminal blocks for the sensor/switch supply, signal, and sensor ground
- Space savings of around 80%
- Time saving of around 60%
- Reduction in wiring due to plug-in bridges

1.2 Optimum Use of Plug-In Bridges

The PLC INTERFACE module achieves maximum efficiency with the user-friendly FBST plug-in bridge system. The PLC-RS.../SEN makes effective use of the bridging options for the power supply for sensors/switches, for the supply/sensor ground at the A2 connection, and for the common supply potential of the PLC at connection 13. Especially effective here are the 500 mm long color-insulated continuous plug-in bridges that can easily be cut to the required length and quickly inserted in the bridge shafts. They eliminate the need for complicated and time-consuming loop bridges – the reduction in wiring by eliminating the need for modular terminal blocks and the use of all bridging options is around 60%.

1.3 Additional Advantages

- Operational safety with RT III (IP67)-protected mechanics
- Environmentally friendly, cadmium-free power contact material for loads up to 250 V AC/6 A
- Available with gold coating for low power levels (mA) as an option
- Integrated input circuit
- Relay can be replaced using an engagement lever
- Safe isolation according to DIN EN 50178
- Inflammability class V0 according to UL94

With the 120 V and 230 V modules, an REL-MR-60DC/... 60 V relay is normally used due to the input circuit integrated in the basic terminal block. For the protection of input and output, inductive loads must be dampened with an effective protective circuit.
