Amphenol® /Pyle® MIL-C-26500 Connectors - environmental connectors for military/aerospace applications

High quality and dependability are the earned reputations of the Amphenol®/Pyle® Series of connectors designed to meet the specification requirements of MIL-C-26500.

Serving such diverse fields as avionics, missile systems, aircraft general-purpose applications, aircraft engines and firewalls, the Amphenol®/Pyle® MIL-C-26500 connector family meets the myriad of problems with innovative connector solutions.

Amphenol®/Pyle® MIL-C-26500 Connectors are medium sized connectors with a rugged design, lightweight construction and continuously dependable performance. This product family provides design features and options which are listed below in the order of the sections of this catalog.

-
- **Aluminum Shells in threaded or bayonet coupling, proprietary (ZZY or ZZW), or supplied to military classes R and G**
 - general purpose, environmentally resistant
 - square flange or single hole receptacles, and straight plug shell styles
 - ratchet lock plug style, which eliminates the need for safety wiring, and a mating threaded receptacle
 - black anodize non-conductive finish for class R and a conductive finish in class G that provides a minimum resistance path through the shell for grounding purposes
 - coupling nuts are hardcoat treated for added protection against wear
 - rear accessory threads accommodate standard MS27291 series cable supports or related accessory hardware
 - **Stainless Steel Shells in threaded or bayonet coupling, proprietary (ZZY or ZZW), or supplied to military class E**
 - machined from 300 series stainless steel providing superior strength and wear characteristics
 - at elevated temperatures, 204°C (399°F), shells experience a less than 10% loss in yield strength
 - shell hardware resists corrosion for the life of the connector without the need of additional finishes
 - same shell styles offered as in aluminum
 - a variety of stainless steel accessories are available
 - **Amphenol special application connector, 48 Series* receptacle short skirt**
 - low profile design for restricted installation requirements
 - **Wire splice connector**
 - space saving, single contact, wire splice module
 - **Firewall Capability Connectors meet the fireproof requirements of MIL-C-5015, Class K. Proprietary (FPK or FYL), or supplied to military Class K**
 - also **FPL** - threaded coupling, same as FPK but used on Lockheed Aircraft. and **FP5K** - threaded coupling, qualified for General Electric
 - non-magnetic stainless steel shells designed for superior strength and elevated temperatures up to 460°F for extended periods
 - same shell styles as stainless steel and aluminum versions
 - **Hermetically sealed MIL-C-26500 connectors, supplied to military class H are also available.**
 - See page 26 for brief description
 - See page 4 for hermetic insert availability
 - Consult Amphenol, Sidney, NY for availability and ordering information.
 - **Contacts and Accessories for MIL-C-26500 connectors**
 - MIL-C-39029 qualified contacts and special application contacts including thermocouple, printed circuit board and shielded/coaxial types
 - Boeing specification contacts
 - Aluminum and stainless steel cable supports; aluminum dummy receptacles
 - Contact crimping/ installation/removal tools for Amphenol 48 series and Pyle-National MIL-C-26500 series

* For more information on other Amphenol®/Pyle® 48 Series products consult Amphenol, Sidney, NY.

MIL-C-26500 Connectors

features

Amphenol®/Pyle® MIL-C-26500 Connectors are qualified to Military Specification MIL-C-26500, as well as numerous high performance customer specifications. As the chart below indicates, these connectors are available with aluminum or stainless steel shells – bayonet or threaded – and are qualified to meet the specifications of these MIL-C-26500 classes:

| MIL-C-26500 Classes | Amphenol/Pyle Series Classes | Hardware Description | Finish |
|------------------------------------|------------------------------|----------------------|------------|
| Class R: (Environmental Resistant) | A | Aluminum Alloy | Anodize |
| Class G | M | Aluminum Alloy | Chromium |
| Class E | R | Stainless Steel | Passivated |
| Class K Firewall | FPK/FYL | Stainless Steel | Passivated |
| Class H Hermetic | HC | CRS/Stainless Steel | Various |

Crimp Contacts

Rear insertable, front releasable, crimp style contacts are machined from a copper alloy material, plated gold over nickel, and are qualified to specification MIL-C-39029. Contacts are crimp terminated outside the connector assembly and inserted into the appropriate cavity by means of a hand tool.

Socket contacts utilize a multi-tined construction and feature a “C” spring which grips the tines, and thus insures consistent and repetitive insertion/withdrawal forces. Contact tines are protected by a stainless steel shroud.

An optional pencil-clip thermocouple socket design is also offered. See page 27 for more information on thermocouple contacts.

Alternate Keying

All MIL-C-26500 Series Connectors with aluminum and stainless steel hardware, can be furnished with normal or any of five alternate key positions. (See page 4).

Each plug shell has a master key and four alternate keys. The position of the alternate keys in relation to the fixed master key determines the key identification. Inserts are bonded to the shell in relation to the master key, thus allowing positive protection against mismatching when differing circuits exist side by side.

Connector Sealing

The insert design utilizes a combination of resilient and rigid insulators to offer a connector with total sealing capabilities.

Bonded interfaces between the resilient and rigid dielectric components eliminate air voids and thus protect the connector from potential degradation due to moisture and altitude conditions.

In Firewall Class K connectors the resilient insert forms the primary contact seal and is bonded to a molded ceramic rigid insert. The insert assembly is physically bonded and mechanically retained to the inside surface of the stainless steel shell, providing a voidless, monoblock configuration impervious to adverse environments.

A pressure seal at the connector interface is accomplished through the aid of a coupling device which compresses the front resilient insulations and thus offers a seal around each contact which prevents the passage of air or moisture through the contact cavity. Back resilient insulators are designed with a triple sealing grip at each wire hole to offer positive sealing and prevent wicking of moisture through the connector without the use of external clamping rings or adapters.

In addition, a dynamic “O” ring seal engages the front of the plug shell when connectors are mated and offers yet another barrier to moisture and containments.

Fluid/Temperature Resistance

The fluorosilicone compound elastomer, developed by Pyle-National, exceeds all specification requirements and provides excellent resistance to tear, compression set, fluids, and high temperatures.

Amphenol/Pyle’s fluorosilicone compound offered in Class R, G, E and K is capable of reliability resisting MIL-H-5606 hydraulic fluid and MIL-L-9236 lubricating oil; as well as MIL-L-7808 and MIL-L-23699 lubricating oils, MIL-J-5624 (JP-5) jet fuel, glycol, and alkaline cleaning solutions of pH 10 or higher. Test methods are as defined in MIL-C-26500 specification. Alternate compounds have been developed by Pyle-National to solve unique user requirements not addressed by the specifications.

Connectors have the capability of resisting high ambient temperatures up to 200°C (392°F) for long periods of time, thus contributing to an extended connector life. Connectors will withstand a combined ambient and internal temperature due to thermal rise of current carrying capacity of 238°C (469°F).

Amphenol®/Pyle® Firewall, Class K, connectors have the inherent ability to resist high temperatures up to 460°F (total temperature) for extended periods of time and can resist short time exposures (20 minutes) to prevent passage of a direct 2000°F flame.

MIL-C-26500

specifications

| TEST REQUIREMENTS | MILITARY SPECIFICATIONS | PYLE CONNECTOR CAPABILITIES |
|---|---|--|
| Air Leakage (Classes E, G, R & K) | 1 cu. inch per hr. max. -55°C (-67°F) | Comply |
| Altitude Immersion (Classes E, G, R & K) | Sea level 1 inch of mercury, 3 cycles (IR 5000 megohms hi-pot 1500 volts-submerged) | Comply |
| Contact Retention (Classes E, G, R & K) | Size 20 contact 20 lbs. min. Size 16 contact 25 lbs. min. Size 12 contact 30 lbs.min. | Exceeds specifications |
| Collet Retention | No requirement | Without damage to the collet or its retention means: Size 20 – 75 lbs. min. Size 16 – 140 lbs. min. Size 12 – 160 lbs. min. |
| Contact Insertion Force (Classes E, G, R & K) | All size contacts 10 lbs. max. | Comply |
| Coupling Forces | Torque required to couple and uncouple mating plugs and receptacles is not to exceed the values listed: Shell size 8 10 12 14 16 18 20 22 24 Torque inch lbs. 9 10 14 17 23 26 31 38 46 | Comply |
| Fluid Resistance (Classes E, G, R & K) | 20 hrs. immersion in MIL-H-5606 hydraulic fluid and MIL-L-9236 lubrication oil. Must meet hi-pot. | 20 hrs. min., fully functional physically and electrically after immersion. No deterioration of resilient material. |
| Ground Resistance (Class G) | .250 ohms backshell of plug to rear of receptacle flange. | Comply |
| High Potential (Classes E, G, R & K) | 1500 VRMS mated & unmated at sea level 1000 VRMS mated to 110,000 ft. altitude | Exceed with ample margin of safety. |
| Insert Retention (Classes E, G, R & K) | 75 psi. from either direction for 5 seconds. | Exceeds specifications. |
| Insulation Resistance (Classes E, G, R & K) | 21°C (70°F), 5000 megohms between adjacent contacts and any contact and shell. | Exceeds specifications. |
| Low Temperature (Classes E, G, R & K) | -55°C (-67°F) | Comply |
| Magnetic Permeability (Classes E, G, R & K) | 2 mu. maximum | Comply |
| Moisture Resistance (Classes E, G, R & K) | 1000 megohms min. per mil-std. 202 method 106 | Comply |
| Ozone Exposure (Classes E, G, R & K) | 0.10 to .015% ozone exposure | Comply |
| Physical Shock (Classes E, G, R & K) | 50 G's, 3 axis, per mil-std-202, method 213, test condition C, wired to monitor 1 microsecond discontinuity. | Comply |
| Sand & Dust Exposure (Classes E, G, R & K) | No requirement. | Meet MIL-E-5272 condition "B" |
| Temperature Life (Classes E, G, R & K) | Connector fully functional for 1000 hours at 200°C (392°F) ambient internal temperature 238°C (460°F) | Comply |
| Thermal Shock (Mated) (Classes E, G, R & K) | Cycled five times from -55°C to 260°C, held for 30 minutes at each temperature and transferred to the other in 2 minutes or less, with no evidence of damage. | Comply |
| Vibration (Classes E, G, R & K) | MIL-Std. 202 method 204 condition "D" at R. T., -55°C (-67°F) and +200°C (+392°F). | Comply - monitored for a max. of 1 micro-second discontinuity. |
| Flame Resistance (Class K) | Performance requirements of Paragraph 4.5.18 Fireproof (Class K of MIL-C-5015D) | Exceeds specifications |

MIL-C-26500

insert arrangements

Rear face of pin insert shown (socket insert opposite).
 Symmetrical about center line.
 ▲ designates Non-MS Configurations.
 K designates Firewall Class K inserts.
 H designates Hermetic inserts.

Contact cavities are identified with a spiral guide line indicating cavity sequence.
 The first and last cavities are numbered and every tenth cavity is bracketed.

Alternate Keying

ALTERNATE POLARITY KEYWAY ARRANGEMENTS (Shell sizes 12, 14, 16, 18, 20, 22, 24, 28)
 View of front face of receptacle shell. Angles are counter-clockwise from "N" keyway. For plug shell, the key locations are clockwise when viewed from front of plug.

| Position | For Connectors Size 8 and 10 | | | | For Connectors Size 12, 14, 16, 18, 20, 22, 24 and 28 | | | |
|----------|------------------------------|------|------|------|---|------|------|------|
| | A | B | C | D | A | B | C | D |
| Normal | 105° | 140° | 215° | 265° | 105° | 140° | 215° | 265° |
| 6 | 102° | 132° | 248° | 320° | 18° | 149° | 192° | 259° |
| 7 | 80° | 118° | 230° | 312° | 92° | 152° | 222° | 342° |
| 8 | 35° | 140° | 205° | 275° | 84° | 152° | 204° | 334° |
| 9 | 64° | 155° | 234° | 304° | 24° | 135° | 199° | 240° |
| Y or 10* | 25° | 115° | 220° | 270° | 98° | 152° | 268° | 338° |

* Y is used for all Military part number callouts - aluminum/stainless steel and firewall;
 10 is used for Amphenol/Pyle part number callouts - aluminum/stainless steel only.
 (See how to order pages 7, 8 and 21).

MIL-C-26500 – how to order aluminum/stainless steel, ratchet lock plug, mating flange receptacle

Amphenol®/Pyle® connectors are specifically designed to meet high vibration requirements above and beyond the specification requirements of MIL-C-26500. The plug connector features a unique non-decoupling device which offers a ratchet mechanism designed to engage as the threaded connectors approach a bottomed condition. Connector coupling assembly continues to ratchet for approximately 120 degrees until the mated connectors reach a complete metal-to-metal bottomed condition. The ratchet device maintains the connectors in a fully coupled condition, thus eliminating the need for safety wiring.

Additional features include:

- Modified accessory thread to accommodate MIL-C-83723 back-shell hardware.
- Rear accessory teeth are featured on both the plug and receptacle shell to assure non-rotation of accessory hardware
- Intermateable with all MIL-C-26500 threaded connectors of like insert arrangement and key position

Amphenol®/Pyle-National® Designation

MIL-C-26500 – 48 Series receptacle short skirt

Receptacle Short Skirt – Aluminum – Bayonet Coupling

Shorter, lighter, and more economical than the standard MIL-C-26500 connector receptacles, the 48 Series receptacle short skirt comes in two versions: with standard flange and with reduced flange. Both versions are 1.100" long which is .275" shorter than the length of the standard MIL-C-26500 connector. They have molded epoxy fiberglass inserts and can operate continuously up to 125°C (257°F), but otherwise they offer the same environmental sealing, from the panel out, as standard MIL-C-26500 connectors. They have bayonet coupling and mate with standard MIL-C-26500 plugs. The hard dielectric inserts, with resilient face seal and molded-in gold plated solder cup pin contacts, are available in insert arrangements shown in the chart below.

Receptacle Short Skirt with Standard Flange

| Insert Arrangement | Amphenol Part Number* | A ±.005 | B ±.005 | C Max. | D +.000 - .005 | E Max. |

* To complete part number: Replace XX with alternate keying positions (omit for normal position). See page 4.

MIL-C-26500 – 48 Series wire splice connector

Special Application Wire Splice Connector

The Amphenol® 48 Series wire splice connector is a low cost, space-saving connector design that can be used for various design applications. The push-mating/twist-pull-unmating feature provides a simple solution to many design requirements without sacrificing performance. This wire splice connector utilizes a metal retention clip for a single size 16 pin and socket contact.

Features and benefits include:

- Push-mating/twist-pull-unmating
- Uses standard M39029/31-229 pin and M39029/32-248 socket contacts
- Incorporates environmental sealing grommet
- Metal collet retention
- Uses standard MIL-C-26500 contact removable tools
- Low cost
- Weight savings design
- Space savings design
- Color coded connector halves - red or blue

MIL-C-26500 – Firewall, Class K

how to order

Class K stainless steel, threaded/bayonet/ratchet lock coupling

Military Designation

Sample ordering number:

MS27613 K 14 T 7 P 6 – D

Shell Type

MS27613 – Square Flange Receptacle
MS27614 – Single Hole Mounting Receptacle
MS27615 – Straight Plug

Class K – Firewall – Stainless steel, passivated

Shell Size

12, 14, 16, 18, 22, 24, 28

Coupling Type

B – Bayonet
S – Ratchet Locking Thread
T – Standard Threaded

Cable Support

Long (MS27658) – D
Short (MS27657) – P
Right Angle (MS27659) – J
(omit for no support)

Alternate Keying

6, 7, 8, 9, Y (omit for normal) See page 4

Contact Type

Pin – P
Socket – S

Insert Arrangement

See chart, page 4

Amphenol®/Pyle-National® Designation

Sample ordering number:

FPK – 11 28 – 42 S T 06 – D – WXX

Connector Type

FPK – Threaded Coupling, qualified to MIL-C-26500 and BACC63 Series
FPL – Threaded Coupling, same as FPK, but used on Lockheed Aircraft
FP5K – Threaded Coupling, qualified for General Electric
FYL – Bayonet Coupling, qualified to MIL-C-26500

Shell Type

11 – Straight Plug
12 – Ratchet Locking Threaded Plug
13 – Improved Non-Decoupling Plug
17 – Square Flange Receptacle
19 – D-Hole Mounting Receptacle

Shell Size

12, 14, 16, 18, 22, 24, 28

Insert Arrangement

See chart, page 4

Variations

Insert – W
Hardware – Y
Standard for Plug Bayonet Hardware – Y19

Cable Support

Long – D
Short – P
Right Angle – J
(omit for no support)

Alternate Keying

06, 07, 08, 09, Y (omit for normal) See page 4

Contact Style

No Contacts – E
Rhodium – T
Gold Contacts – D

Contact Type

Pin – P
Socket – S

Boeing Company Designation

Sample ordering number:

BAC C 63X 14 – 07 P 6

Boeing Aircraft Company

Electrical Connector

Shell Type

63X – Plug, Threaded, Fire Barrier
63Y – Receptacle, Threaded Fire Barrier
63AE – Plug, Threaded, for use with No. 20 Wire Fire Barrier
63AF – Receptacle, Flange Mount, Threaded, Fire Barrier, For use with No. 20 Wire Fire Barrier.
Note: AE & AF require W11 variation on Pyle Number.

Alternate Keying

6, 7, 8, 9, Y, (omit for normal) See page 4

Contact Type

Pin – P
Socket – S

Insert Arrangement

See chart, page 4

Accessories

To order with D Cable Clamp, replace – with Letter C

Shell Size

12, 14, 16, 18, 22, 24, 28

Hermetic MIL-C-26500 Connectors

hermetically sealed

Amphenol®/Pyle® is an experienced supplier of highly reliable hermetic connectors for the aircraft industry. Amphenol's ZZL and ZZB series of hermetic receptacles are designed to the requirements of MIL-C-26500, and are available in tin-plated cold-rolled steel shells and gold-plated nickel-iron alloy contacts. Other material variations, including stainless steel, are available.

Hermetic receptacles are available in shell sizes 8, 10, 12, 14, 16, 18, 22, 24 and 28. The hermetic series is offered in a variety of receptacle shell styles, which include solder mount, square flange and "D" hole mount. These connectors can be ordered with either eyelet, solderwell or printed circuit tail pin contacts.

Consult Amphenol, Sidney, NY for more information on hermetic connectors, and for optional connector designs.

Amphenol®/Pyle® How to Order Designation for Hermetic Connectors

Sample ordering number:

ZZL – HC – 14 12 – 03 P 06 W – H45

Series Designation

ZZL – Threaded Coupling
ZZB – Bayonet Coupling

Class

HC – Denotes Hermetic Class

Shell Style

14 – Solder Mount Receptacle
15 – Single Hole Mounting Receptacle
17 – Square Flange Receptacle

Shell Size

8, 10, 12, 14, 16, 18, 22, 24, 28

Insert Arrangement

See inserts labeled with an "H" on page 4.

Contact Type

P denotes male pin contacts with standard gold plate

Alternate Key Position

06, 07, 08, 09, 10 (omit for normal)
(See page 4)

Special Modifications

H45 – 304L stainless steel shell
H52 – Tinned termination tails
H56 – Same as standard; gold contacts
H77 – 304L stainless steel shell, Inconel contacts
H127 – Same as H125 except 304L stainless steel shell
H146 – 303 stainless steel shell, 100 microinch gold
H152 – 304L stainless steel shell with individual beads, loose seals
H177 – 303 stainless steel shell, loose seals
H181 – Tin plated contacts

Contact Style

E – designates eyelet
W – designates solderwell
Consult Amphenol, Sidney, NY for ordering information of printed circuit tail contacts.

Contacts and Accessories

for MIL-C-26500 cylindrical connectors

Crimp Contacts per MIL-C-39029 – Copper Alloy, Gold Plating

| PIN CONTACTS | | | | |

* Pencil clip socket design - see page 2 for description.

** Split tine socket with napkin ring design - see page 2 for description.

Printed Circuit Board/Wire-Wrap Contacts

A variety of different designs are available; please consult Amphenol, Sidney, NY for more information.

Reel Contacts

2000 contacts per reel (gold or rhodium plated) are available. Consult Amphenol, Sidney, NY for more information.

Sealing Plugs

For sealing spare contact holes. Same sealing plug is used in both plug and receptacle.

* Conforms to MIL-C-22520/2 specification.

** MS3191 tools are inactive for new procurement, but can be used if available.

*** Refer to illustration on page 29.

† Same as 294-126, less positioners.

†† Including Hex Die Set

Shielded Contact Assembly Procedure

Type 1

| | | |
|--------|---|--|
| Step 1 | Slide sealing boot or sleeve and outer ferrule onto cable and strip cable as shown at right. After stripping, slide spacer over center conductor as shown for Type 2 and Type 3 . For Type 3 slide spacer under wire braid. | |
| Step 2 | Insert stripped center conductor into contact until wire shows through inspection hole and dielectric (Type 1, Type 4 and Type 5) or spacer (Type 2 and Type 3) butts against contact. Fully seat contact in nest bushing of crimp tool and crimp in one full stroke. (Follow same crimping procedures except use nest bushing crimping tool from table above). | |
| Step 3 | Slightly flair out ends of wire braid to facilitate insertion of inner ferrule of body assembly. Do not comb braid. | |
| Step 4 | Install center contact in body assembly and slide inner ferrule underneath wire braid as shown. Push center contact until it is locked in place in the body assembly. Pull lightly on cable to make sure that contact is securely locked in place. | |
| Step 5 | Slide outer ferrule over braid and up against body as shown. There should be no slack in the wire braid. Crimp the outer ferrule with proper tool from table above. Then for Type 1, Type 3 and Type 5 slide sealing sleeve toward contact until sleeve touches outer ferrule. | |
| Step 6 | Insert the assembled shielded contact into the connector in the same way as the standard contact using applicable insertion tool (see page 28). This completes assembly for Type 1, Type 2, Type 3 and Type 5 . | |
| Step 7 | To complete assembly for Type 4 , push sealing boot into connector grommet until O-ring riser of boot snaps into place and seals the assembly. | |

Shielded/Coaxial Contacts, cont.

for MIL-C-26500 cylindrical connectors

Cable Stripping

Strip cable jacket, braid and dielectric to the dimensions shown in the table on page 28. Make all cuts square and sharp, being careful not to nick braid, dielectric, or center conductor when cutting. If conductor ends fray, twist them to their normal lay.

| 12 | ZZL-R-9511-12 | MS-24256-R-12 | Yellow | ZZL-R-9557-12 | – |

Contact Termination

Use table below to determine correct wire stripping length for your wire sizes. When stripping the wire, avoid nicking wires or damaging insulation, as it is a functional part of the sealing system.

| Contact Size | Wire Size | Stripping Length |
|--------------|-----------|------------------|
| 20 | 20 to 24 | .170" – .201" |
| 16 | 16 to 18 | .207" – .238" |
| 12 | 12 to 14 | .207" – .238" |

See pages 32 and 33 for assembly instructions for proper contact termination and contact insertion/removal.

NOTE: Amphenol and Pyle tools are interchangeable.

Assembly Instructions for MIL-C-26500 Connectors

Contact Termination

Contacts should be crimped to the wire with MS Standard hand crimping tools or specification automatic crimping machines.

When stripping the wire avoid nicking wires or damaging the insulation as it is a functional part of the sealing system.

| Contact Size | Wire Size | Stripping Length |
|--------------|-----------|------------------|
| 20 | 20 to 24 | .170" – .201" |
| 16 | 16 to 18 | .207" – .238" |
| 12 | 12 to 14 | .207" – .238" |

Follow steps 1 – 4, as shown below, for proper contact crimping:

1. Insert stripped wire into contact pocket until it is visible through inspection hole.

2. Carefully seat contact in crimp tool positioner.

3. Crimp in one full stroke. (The ratchet will not release jaws until tool has completed stroke).

4. Inspect crimp for wire visibility through inspection hole.

Assembly Instructions for MIL-C-26500 Connectors, cont.

Contact Insertion into the Connector

The following steps are recommended for assembly.

NOTE:

The Pyle Miniature Connector is designed with a unique sealing principle. Assembly of contacts into the connector must be made with reasonable care to avoid damage to the silicone rubber insert.

1. Lubricate wire cavities in back face of insert with a very thin film of DC-200 Silicone Oil or equal before inserting contacts.
2. Locate contact in insertion tool (as shown in illustration).
3. Align contact with hole in rear face of insert. The alignment of insertion tool with contact must be coaxial with the axis of the connector. When contact has entered rear seal portion of insert, maintain alignment of contact and tool parallel to, and in line with hole. Insert contact to full depth. Seating of the contact in the retention collet is audible. The contact insertion force is less than five pounds.
4. Extract insertion tool, keeping it aligned with hole.

Contact Removal from the Connector

A contact is removed from the connector insert with the extraction tool as follows:

1. Set the spacer sleeve in the proper position for removal of male or female contact.
2. Place tool over the contact and insert into front face of cavity. The alignment of removal tool with contact must be coaxial with axis of connector.
3. Exert a nominal force axially (from 5 to 10 lbs.) to release retention collet. Spacer sleeve will shoulder at front face of insulation when tool is inserted to proper depth.
4. Push extraction plunger to force the contact out of the rear of the insert.
5. Grasp contact or wire at rear face of insert and complete the extraction.
6. Remove extraction tool axially.
7. After using extraction tool the spacer sleeve should be set forward in last notch to protect the end of the plunger guide.

Panel Mounting

Two receptacle shell styles, flange mount and D-hole mount, are available for panel mounting. See the applicable drawings for mounting hole dimensions. The square flange receptacle, sizes 10 through 22, is fastened to the panel with four size #4-40 machine screws. The 24 and 28 size shells are fastened with #6-32 machine screws.

Accessories - cable supports

for MIL-C-26500 cylindrical connectors

Cable Supports - Aluminum

Cable clamps support cable or wire at the plug or receptacle and prevent twisting and pulling.

Accessories - dummy receptacles for MIL-C-26500 cylindrical connectors

Dummy Receptacles - Aluminum - Threaded or Bayonet

Used as an anchoring place for disconnected plugs, dummy receptacles eliminate the problems involved in letting plugs swing freely. They also provide a limited air seal and prevent accumulation of foreign material on the face of the plug. Order by part numbers in chart below.

Accessories - protection caps for MIL-C-26500 cylindrical connectors

Protection Caps and Chains - Threaded or Bayonet

Protective metal caps provide an environmental seal for the connector face. They exclude dirt, dust, moisture and other foreign materials from the face of unmated plugs and receptacles. The caps have a woven steel strap so they can be easily attached near their point of use.

Компания «Life Electronics» занимается поставками электронных компонентов импортного и отечественного производства от производителей и со складов крупных дистрибьюторов Европы, Америки и Азии.

С конца 2013 года компания активно расширяет линейку поставок компонентов по направлению коаксиальный кабель, кварцевые генераторы и конденсаторы (керамические, пленочные, электролитические), за счёт заключения дистрибьюторских договоров

Мы предлагаем:

- Конкурентоспособные цены и скидки постоянным клиентам.
- Специальные условия для постоянных клиентов.
- Подбор аналогов.
- Поставку компонентов в любых объемах, удовлетворяющих вашим потребностям.
- Приемлемые сроки поставки, возможна ускоренная поставка.
- Доставку товара в любую точку России и стран СНГ.
- Комплексную поставку.
- Работу по проектам и поставку образцов.
- Формирование склада под заказчика.
- Сертификаты соответствия на поставляемую продукцию (по желанию клиента).
- Тестирование поставляемой продукции.
- Поставку компонентов, требующих военную и космическую приемку.
- Входной контроль качества.
- Наличие сертификата ISO.

В составе нашей компании организован Конструкторский отдел, призванный помогать разработчикам, и инженерам.

Конструкторский отдел помогает осуществить:

- Регистрацию проекта у производителя компонентов.
- Техническую поддержку проекта.
- Защиту от снятия компонента с производства.
- Оценку стоимости проекта по компонентам.
- Изготовление тестовой платы монтаж и пусконаладочные работы.
