

## Single-Stage Flyback or Buck-Boost Current Control with Active PFC and Integrated High Voltage MOSFET

### DESCRIPTION

TS19706CS is a very efficient constant current controller IC for low cost non-dimmable LED lighting applications. The TS19706CS is configurable for either isolated primary side Flyback regulation or non-isolated buck-boost current regulation topology. Integrated 630V Power MOSFET and active power factor correction in Flyback mode reduces the external components required and BOM for implementation. The IC achieves high power factor correction and low total harmonic distortion (THD) with Boundary Conduction Mode (BCM) operation. Temperature compensation of line/load regulation allows constant current accuracy to be maintained to  $<\pm 3\%$ . TS19706CS also provides over temperature protection,  $V_{CC}$  overvoltage protection, and system output open and short circuit protection.

### FEATURES

- Integrated 630V MOSFET
- Constant Current Accuracy within  $<\pm 3\%$
- Primary-Side Feedback Control
- Application Voltage Range  $80 \text{ V}_{AC} \sim 308 \text{ V}_{AC}$
- Transition-Mode PFC Operation
- Built-in Active Power Factor Correction
- Good Line and Load Regulation
- Open-LED Protection on DMG pin
- Over-Voltage Protection on  $V_{CC}$  pin
- Short-LED Protection
- Cycle-by-Cycle Over Current Protection on CS pin
- Over-Temperature Protection
- Compliant to RoHS Directive 2011/65/EU and WEEE 2002/96/EC.
- Halogen-free according to IEC 61249-2-21.

### APPLICATION

- LED lighting
- Down lights, Tube lamps, PAR Lamps, Bulbs

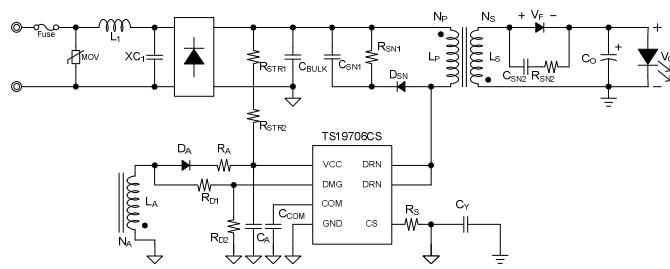

#### Pin Definition:

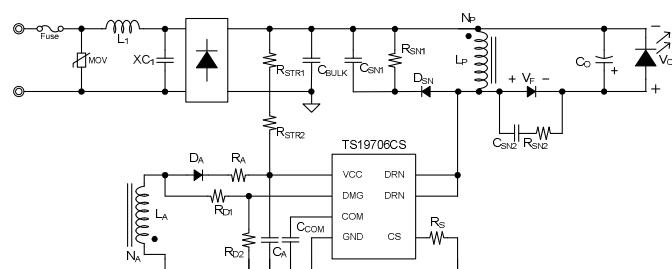

1. GND	8. CS
2. COM	7. NC
3. DMG	6. DRN
4. V <sub>CC</sub>	5. DRN

Notes: MSL 3 (Moisture Sensitivity Level) per J-STD-020

### TYPICAL APPLICATION CIRCUIT

Flyback Converter

**Note:**

1. Stresses listed as the above "Absolute Maximum Ratings" may cause permanent damage to the device. These are for stress ratings. Functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may remain possibility to affect device reliability.
2. Devices are ESD sensitive. Handling precautions recommended.
3. Thermal Resistance is specified with the component mounted on a low thermal conductivity test board in free air at  $T_A=25^\circ\text{C}$ .
4. The device is not guaranteed to function outside its operating conditions.
5. Guaranteed by design.
6. Linear degeneration Type.

## APPLICATION INFORMATION

### Function Description

The TS19706CS is configurable for either isolated primary side Flyback regulation or non-isolated buck-boost current regulation topologies. The IC active power factor correction in Flyback mode and achieves constant current accuracy and low total harmonic distortion (THD) using Boundary Conduction Mode (BCM) operation. An integrated 630V switching MOSFET reduces the external components required for application implementation. The TS19706CS has built-in  $V_{CC}$  over voltage protection, open LED protection, short LED protection, over temperature protection, and primary-side current limit.

The average output current can be expressed as below.

$$I_{OUT\_avg} = \frac{N_P}{N_S} \times \frac{0.370 * \eta}{2 \times R_S}$$

Where:

- $I_{OUT\_avg}$  is the average output current
- $N_P$  is the primary-side turn ratio
- $N_S$  is the secondary-side turn ratio
- $\eta$  is the efficiency
- $R_S$  is the sensing resistor connected between the MOSFET source and the GND

### Pin Definitions

#### **COM (Compensation)**

This is the output of the  $g_m$  amplifier. Connect with a suitable RC network to ground.

#### **GND (Ground)**

GND is the reference node of internal circuit.

#### **CS (Current Sense)**

MOSFET current signal sensing for multiplication and current limit setting function.

$$I_{CS(LIMIT)} = \frac{1.35}{R_S}$$

Where:

- $I_{CS(LIMIT)}$  is the input current sense
- $R_S$  is the sensing resistor connected between the MOSFET source and GND

#### **DRN (Drain)**

Internal Power MOSFET Drain.

#### **$V_{CC}$**

Power supply for the controller during normal operation. The controller will start up when  $V_{CC}$  reaches 15.3V (typical) and will shut-down when  $V_{CC}$  voltage is below 7.8V (typical). A decoupling capacitor should be connected between the  $V_{CC}$  and GND pin as close as possible.

The TS19706CS performs  $V_{CC}$  over voltage protection through  $V_{CC}$  pin. Once  $V_{CC}$  pin exceeds in 34V, TS19706CS turns off and latchs out the MOSFET switcher until  $V_{CC}$  goes below  $V_{CC\_OFF}$ .

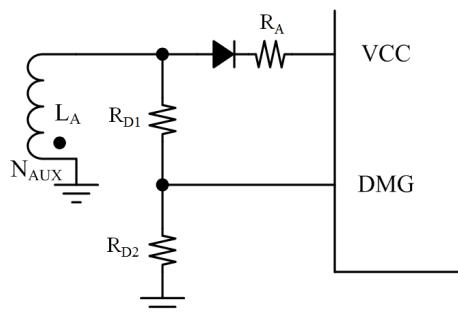

## APPLICATION INFORMATION (CONTINUE)

### DMG (Zero Current Demagnetization)

The output voltage is defined by the auxiliary winding ( $N_{AUX}$ ) of the fly-back transformer. The DMG pin senses output information to protect against undervoltage ( $V_O < V_{O\_STR}$ ) and overvoltage ( $V_O > V_{O\_OVP}$ ).

When the DMG senses voltage under  $V_{O\_STR}$  the circuit will operate in short circuit protection mode,  $f_{STR}=1/t_{STR}$ .

When the DMG senses voltage over  $V_{O\_OVP}$ , the circuit will implement over-voltage protection latch until  $V_{CC}$  goes below  $V_{CC\_OFF}$ .

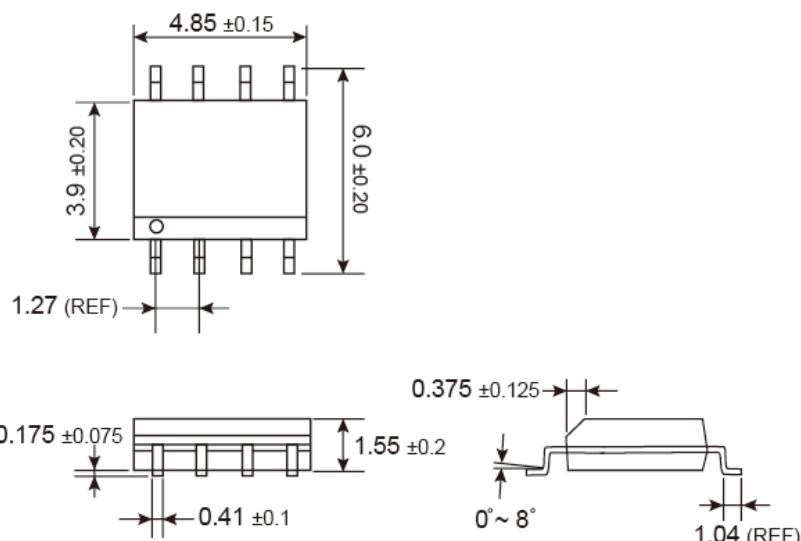

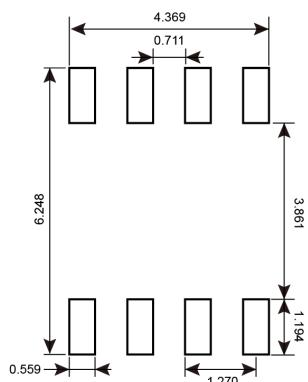

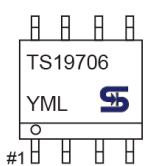

$$V_{O\_OVP} = \frac{N_{SEC}}{N_{AUX}} \times V_{OVPS} \times \frac{R_{D1} + R_{D2}}{R_{D2}}$$

$$V_{O\_STR} = \frac{N_{SEC}}{N_{AUX}} \times 3 \times \frac{R_{D1} + R_{D2}}{R_{D2}}$$

Where :

- $V_{OUT\_OVP}$  is the output-over-voltage protection point
- $V_{OVPS}$  is the over voltage protection signal
- $V_{O\_STR}$  is the start-up timer
- $N_{AUX}$  is the number of auxiliary-winding turns
- $N_{SEC}$  is the number of secondary-winding turns

ИНН 7805602321 КПП 780501001 Р/С 40702810122510004610 ФАКБ "АБСОЛЮТ БАНК" (ЗАО) в г.Санкт-Петербурге К/С 30101810900000000703 БИК 044030703

Компания «Life Electronics» занимается поставками электронных компонентов импортного и отечественного производства от производителей и со складов крупных дистрибуторов Европы, Америки и Азии.

С конца 2013 года компания активно расширяет линейку поставок компонентов по направлению коаксиальный кабель, кварцевые генераторы и конденсаторы (керамические, пленочные, электролитические), за счёт заключения дистрибуторских договоров

Мы предлагаем:

- Конкурентоспособные цены и скидки постоянным клиентам.
- Специальные условия для постоянных клиентов.
- Подбор аналогов.
- Поставку компонентов в любых объемах, удовлетворяющих вашим потребностям.
- Приемлемые сроки поставки, возможна ускоренная поставка.
- Доставку товара в любую точку России и стран СНГ.
- Комплексную поставку.
- Работу по проектам и поставку образцов.
- Формирование склада под заказчика.
- Сертификаты соответствия на поставляемую продукцию (по желанию клиента).
- Тестирование поставляемой продукции.
- Поставку компонентов, требующих военную и космическую приемку.
- Входной контроль качества.
- Наличие сертификата ISO.

В составе нашей компании организован Конструкторский отдел, призванный помочь разработчикам, и инженерам.

Конструкторский отдел помогает осуществить:

- Регистрацию проекта у производителя компонентов.
- Техническую поддержку проекта.
- Защиту от снятия компонента с производства.
- Оценку стоимости проекта по компонентам.
- Изготовление тестовой платы монтаж и пусконаладочные работы.
