

## Bi-directional High Speed, Low Power Digital Optocoupler with R<sup>2</sup>Coupler™ Isolation in a Stretched 12-Pin Surface Mount Plastic Package

### Data Sheet

#### Description

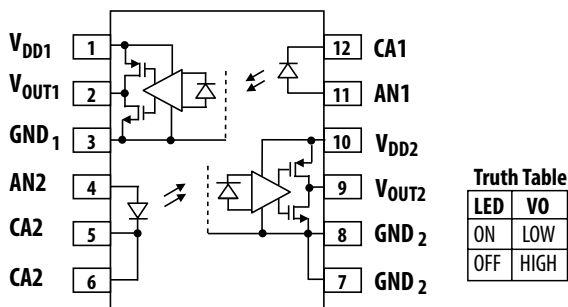

The ACFL-6211U and ACFL-6212U are dual channel, bi-directional, high speed digital CMOS optocouplers. The stretched SO-12 stretched package outline is designed to be compatible with standard surface mount processes and occupies the same land area as their single channel stretched SO8 package.

This digital optocoupler uses an insulating layer between the light emitting diode and an integrated photo detector to provide electrical insulation between input and output.

Each channel of the digital optocoupler has a CMOS detector IC with an integrated photodiode, a high speed trans-impedance amplifier, and a voltage comparator with an output driver. Each channel is also isolated from the other.

Avago R2Coupler technology provides reinforced insulation and reliability that delivers safe signal isolation critical in high temperature industrial applications.

#### Functional Diagram

| LED | VO   |
|-----|------|
| ON  | LOW  |
| OFF | HIGH |

**NOTE** The connection of a 1  $\mu$ F bypass capacitor between pins 1 and 3 and pins 8 and 10 is recommended.

#### Features

- Wide temperature range:  $-40^{\circ}\text{C}$  to  $+125^{\circ}\text{C}$
- 5 V CMOS compatibility
- 40 kV/ $\mu\text{s}$  common-mode rejection at  $V_{\text{CM}}=1000\text{V}$  (typ)
- Low propagation delay:
  - ACFL-6211U: 25 ns at  $I_{\text{F}} = 10\text{ mA}$  (typ)
  - ACFL-6212U: 60 ns at  $I_{\text{F}} = 4\text{ mA}$  (typ)
- Compact, auto-insertable stretched SO12 packages
- Worldwide safety approval:
  - UL 1577 recognized, 5kV<sub>RMS</sub>/1 min.
  - CSA Approved
  - IEC/EN/DIN EN 60747-5-5

#### Applications

- CANBus and SPI communications interface
- High temperature digital/analog signal isolation
- Power transistor isolation

**CAUTION** It is advised that normal static precautions be taken in handling and assembly of this component to prevent damage and/or degradation which may be induced by ESD. The components featured in this data sheet are not to be used in military or aerospace applications or environments.

## Pin Description

| Pin No. | Pin Name          | Description               | Pin No. | Pin Name          | Description                 |
|---------|-------------------|---------------------------|---------|-------------------|-----------------------------|
| 1       | V <sub>DD1</sub>  | Primary Side Power Supply | 7       | GND2              | Secondary Side Ground       |
| 2       | V <sub>OUT1</sub> | Output 1                  | 8       | GND2              | Secondary Side Ground       |
| 3       | GND1              | Primary Side Ground       | 9       | V <sub>OUT2</sub> | Output 2                    |
| 4       | AN2               | Anode 2                   | 10      | V <sub>DD2</sub>  | Secondary Side Power Supply |
| 5       | CA2               | Cathode 2                 | 11      | AN1               | Anode 1                     |
| 6       | CA2               | Cathode 2                 | 12      | CA1               | Cathode 1                   |

## Ordering Information

To order, choose a part number from the part number column and combine with the desired option from the option column to form an order entry.

Example 1:

ACFL-6212U-560E to order product of SSO-12 Surface Mount package in Tape and Reel packaging with IEC/EN/DIN EN 60747-5-5 Safety Approval in RoHS compliant.

Option datasheets are available. Contact your Avago sales representative or authorized distributor for information.

# Package Outline Drawing

## 12-Lead Surface Mount

Dimensions in inches (millimeters)

Lead coplanarity = 0.004 inches (0.1 mm)

## Recommended Pb-Free IR Profile

Recommended reflow condition as per JEDEC Standard, J-STD-020 (latest revision).

**NOTE** Non-halide flux should be used.

## Regulatory Information

The ACFL-6211U and ACFL-6212U are approved by the following organizations:

|                                |  |
|--------------------------------|--|
| <b>UL</b>                      | UL 1577, component recognition program up to VISO = 5kVRMS |
| <b>CSA</b>                     | Approved under CSA Component Acceptance Notice #5          |
| <b>IEC/EN/DIN EN 60747-5-5</b> | Approved under IEC/EN/DIN EN 60747-5-5                     |

## Insulation and Safety Related Specifications

| Parameter   | Symbol | ACFL-6211U / ACFL-6212U | Units | Conditions   |
|---|--------|-------------------------|-------|--|
| Minimum External Air Gap (Clearance)              | L(101) | 8.3                     | mm    | Measured from input terminals to output terminals, shortest distance through air.  |
| Minimum External Tracking (Creepage)              | L(102) | 8.5                     | mm    | Measured from input terminals to output terminals, shortest distance path along body.  |
| Minimum Internal Plastic Gap (Internal Clearance) |        | 0.08                    | mm    | Through insulation distance conductor to conductor, usually the straight line distance thickness between the emitter and detector. |
| Tracking Resistance (Comparative Tracking Index)  | CTI    | 175                     | V     | DIN IEC 112/VDE 0303 Part 1  |
| Isolation Group (DIN VDE0109)                     |        | IIla                    |       | Material Group (DIN VDE 0109)  |

## IEC/EN/DIN EN 60747-5-5 Insulation Related Characteristic (Option 060E and 560E)

| Common Mode Transient Immunity at Logic High Output | $ CM_H $  | 15   | 25   |      | kV/ $\mu\text{s}$ | $V_{in} = 0\text{V}$ , $R_{in} = 390\Omega \pm 5\%$ , $C_{in} = 100\text{pF}$ ,<br>$V_{cm} = 1000\text{V}$ , $T_A = 25\text{ }^\circ\text{C}$   |          | d       |
| Common Mode Transient Immunity at Logic Low Output  | $ CM_L $  | 15   | 25   |      | kV/ $\mu\text{s}$ | $V_{in} = 4.5\text{V}-5.5\text{V}$ , $R_{in} = 390\Omega \pm 5\%$ ,<br>$C_{in} = 100\text{pF}$ , $V_{cm} = 1000\text{V}$ , $T_A = 25\text{ }^\circ\text{C}$                                     |          | e       |

- $t_{PHL}$  propagation delay is measured from the 50% ( $V_{IN}$  or  $I_F$ ) on the rising edge of the input pulse to the 0.8V of  $V_{DD}$  of the falling edge of the  $V_O$  signal.  $t_{PLH}$  propagation delay is measured from the 50% ( $V_{IN}$  or  $I_F$ ) on the falling edge of the input pulse to the 80% level of the rising edge of the  $V_O$  signal.
- PWD is defined as  $|t_{PHL} - t_{PLH}|$ .
- $t_{PSK}$  is equal to the magnitude of the worst case difference in  $t_{PHL}$  and/or  $t_{PLH}$  that will be seen between units at any given temperature within the recommended operating conditions.
- $CM_H$  is the maximum tolerable rate of rise of the common mode voltage to assure that the output will remain in a high logic state.
- $CM_L$  is the maximum tolerable rate of fall of the common mode voltage to assure that the output will remain in a low logic state.

## ACFL-6212U Low Power Mode Switching Specifications

Over recommended operating conditions:  $T_A = -40\text{ }^\circ\text{C}$  to  $+125\text{ }^\circ\text{C}$ ,  $3.0\text{ V} \leq V_{DD} \leq 5.5\text{ V}$ . All typical specifications at  $25\text{ }^\circ\text{C}$  and  $V_{DD} = 5\text{ V}$ .

| Parameter   | Symbol    | Min. | Typ. | Max. | Units       | Test Conditions   | Fig   | Note    |
|---|-----------|------|------|------|-------------|---|-------|---------|
| Propagation Delay Time to Logic Low Output          | $t_{PHL}$ |      | 60   | 100  | ns          | IF = 4mA, CL= 15pF  | 7, 12 | a, b, c |
| Propagation Delay Time to Logic High Output         | $t_{PLH}$ |      | 35   | 100  | ns          |   |       |         |
| Pulse Width Distortion                              | PWD       |      | 25   | 50   | ns          |   |       |         |
| Propagation Delay Skew                              | $t_{PSK}$ |      |      | 60   | ns          |   |       |         |
| Output Rise Time (10% –90%)                         | $t_R$     |      | 10   |      | ns          |   |       |         |
| Output Fall Time (90% - 10%)                        | $t_F$     |      | 10   |      | ns          |   |       |         |
| Common Mode Transient Immunity at Logic High Output | $ CM_H $  | 25   | 40   |      | kV/ $\mu$ s | Using Avago LED Driving Circuit, $V_{IN} = 0\text{ V}$ ,<br>R1 = $330\ \Omega \pm 5\%$ ,<br>R2 = $330\ \Omega \pm 5\%$ ,<br>$V_{CM} = 1000\text{ V}$ , $T_A = 25\text{ }^\circ\text{C}$         |       | d       |
| Common Mode Transient Immunity at Logic Low Output  | $ CM_L $  | 25   | 40   |      | kV/ $\mu$ s | Using Avago LED Driving Circuit,<br>$V_{IN}=4.5 - 5.5\text{V}$ ,<br>R1 = $330\ \Omega \pm 5\%$ ,<br>R2 = $330\ \Omega \pm 5\%$ ,<br>$V_{CM} = 1000\text{ V}$ , $T_A = 25\text{ }^\circ\text{C}$ |       | e       |

- $t_{PHL}$  propagation delay is measured from the 50% ( $V_{IN}$  or  $I_F$ ) on the rising edge of the input pulse to the 0.8V of  $V_{DD}$  of the falling edge of the  $V_O$  signal.  $t_{PLH}$  propagation delay is measured from the 50% ( $V_{IN}$  or  $I_F$ ) on the falling edge of the input pulse to the 80% level of the rising edge of the  $V_O$  signal.
- PWD is defined as  $|t_{PHL} - t_{PLH}|$ .
- $t_{PSK}$  is equal to the magnitude of the worst case difference in  $t_{PHL}$  and/or  $t_{PLH}$  that will be seen between units at any given temperature within the recommended operating conditions.
- $CM_H$  is the maximum tolerable rate of rise of the common mode voltage to assure that the output will remain in a high logic state.
- $CM_L$  is the maximum tolerable rate of fall of the common mode voltage to assure that the output will remain in a low logic state.

## Package Characteristics

All Typical at  $T_A = 25\text{ }^\circ\text{C}$ .

| Parameter                                | Symbol    | Min. | Typ.      | Max. | Units    | Test Conditions  | Notes |
|--|-----------|------|-----------|------|----------|--|-------|
| Input-Output Momentary Withstand Voltage | $V_{ISO}$ | 5000 |           |      | Vrms     | RH $\leq 50\%$ , t = 1 min, $T_A = 25\text{ }^\circ\text{C}$ | a, b  |
| Input-Output Resistance                  | $R_{I-O}$ |      | $10^{14}$ |      | $\Omega$ | $V_{I-O} = 500\text{ V dc}$                                  | a     |
| Input-Output Capacitance                 | $C_{I-O}$ |      | 0.6       |      | pF       | f = 1 MHz, $T_A = 25\text{ }^\circ\text{C}$                  | a     |

- Device considered a two terminal device: pins 1 to 6 shorted together, and pins 7 to 12 shorted together.
- In accordance with UL 1577, each optocoupler is proof tested by applying an insulation test voltage  $> 6000V_{RMS}$  for 1 second.

## Thermal Resistance Measurement

The diagram of ACFL-6211U/6212U for measurement is shown in Figure 15. This is a multi-chip package with four heat sources, the effect of heating of one die due to the adjacent dice are considered by applying the theory of linear superposition. Here, one die is heated first and the temperatures of all the dice are recorded after thermal equilibrium is reached. Then, the 2nd die is heated and all the dice temperatures are recorded and so on until the 4th die is heated. With the known ambient temperature, the die junction temperature and power dissipation, the thermal resistance can be calculated. The thermal resistance calculation can be cast in matrix form. This yields a 4 by 4 matrix for our case of two heat sources.

pub-005390 – December 25, 2015

Компания «Life Electronics» занимается поставками электронных компонентов импортного и отечественного производства от производителей и со складов крупных дистрибьюторов Европы, Америки и Азии.

С конца 2013 года компания активно расширяет линейку поставок компонентов по направлению коаксиальный кабель, кварцевые генераторы и конденсаторы (керамические, пленочные, электролитические), за счёт заключения дистрибьюторских договоров

Мы предлагаем:

- Конкуренспособные цены и скидки постоянным клиентам.
- Специальные условия для постоянных клиентов.
- Подбор аналогов.
- Поставку компонентов в любых объемах, удовлетворяющих вашим потребностям.
- Приемлемые сроки поставки, возможна ускоренная поставка.
- Доставку товара в любую точку России и стран СНГ.
- Комплексную поставку.
- Работу по проектам и поставку образцов.
- Формирование склада под заказчика.
- Сертификаты соответствия на поставляемую продукцию (по желанию клиента).
- Тестирование поставляемой продукции.
- Поставку компонентов, требующих военную и космическую приемку.
- Входной контроль качества.
- Наличие сертификата ISO.

В составе нашей компании организован Конструкторский отдел, призванный помогать разработчикам, и инженерам.

Конструкторский отдел помогает осуществить:

- Регистрацию проекта у производителя компонентов.
- Техническую поддержку проекта.
- Защиту от снятия компонента с производства.
- Оценку стоимости проекта по компонентам.
- Изготовление тестовой платы монтаж и пусконаладочные работы.
