

# MAX14626

## High-Voltage Reverse-Input-Capable 4–20mA Current Loop Protector

### General Description

The MAX14626 current loop protector features a current-limit switch to prevent damage to the sensor devices due to faulty current loop conditions. The current-limit switch features a 25Ω (typ) on-resistance and operates from a +2.3V to +36V input voltage range. The accurate current limit is set to 30mA, making the part ideal for protecting the sensor reading devices.

The MAX14626 handles an overcurrent event in a continuous current-limit mode. Additional safety features include thermal shutdown to prevent overheating and reverse-input blocking to protect from being reverse connected into the sensor.

The device is available in a tiny 6-pin (3mm x 3mm), TDFN exposed pad package and is specified over the -40°C to +85°C extended temperature range.

### Applications

Industrial Current Loop Control

### Benefits and Features

- ◆ **High Performance**
  - Low On-Resistance 25Ω (typ)
  - Accurate ±10% Current Limit
  - +2.3V to +40V Wide Supply Voltage Range
  - Low Operating Current
  - Ultra-Low Temperature Coefficient
- ◆ **Robust Protection for Sensors**
  - Avoids Power Dissipation Issues Compared to Discrete Solutions
  - Thermal Shutdown
  - Reverse Input Protection
- ◆ **Saves Space in Compact Systems**
  - Eliminates Need for Discrete PTC Poly Switch, Zener Diodes, and Resistors
  - 3mm x 3mm, 6-Pin TDFN Package

### ABSOLUTE MAXIMUM RATINGS

(All voltages referenced to GND.)

IN to GND .....	-40V to +40V
OUT to GND .....	-0.3V to +40V
Current into IN .....	Internally Limited
Current into OUT .....	100mA
Continuous Power Dissipation ( $T_A = +70^\circ\text{C}$ )	
TDFN (derate 23.8mW/°C above +70°C).....	1904.8mW

Operating Temperature Range .....	-40°C to +125°C
Maximum Junction Temperature.....	+150°C
Storage Temperature Range.....	-65°C to +150°C
Lead Temperature (soldering, 10s) .....	+300°C
Soldering Temperature (reflow) .....	+260°C

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

### Functional Diagram

### Detailed Description

The MAX14626 current loop protector features a current-limit switch to prevent damage to the sensor devices due to faulty current loop conditions. The current-limit switch features a  $25\Omega$  (typ) on-resistance and operates from a +2.3V to +36V input voltage range. The accurate current limit is set to 30mA, making the part ideal for protecting the sensor reading devices.

The MAX14626 handles an overcurrent event in a continuous current-limit mode. Additional safety features include thermal shutdown to prevent overheating and reverse input blocking to protect from being reverse connected into the sensor.

### Reverse Input Protection

The device features reverse input protection to protect the downstream sensor. When a reverse input voltage is detected, control circuitry turns off the internal FET and isolates the output from the input.

### Thermal Shutdown

The device enters thermal shutdown when the die temperature exceeds +150°C (typ). In thermal shutdown, the internal FETs are turned off. When the die temperature drops by 20°C, the device turns back on automatically.

### Applications Information

Figure 1 shows the device in a 4–20mA current loop sensor application.

### Exposed Pad and Layout Concerns

Connect the exposed pad to a large ground plane to maximize thermal performance. The exposed pad is not intended as an electrical connection point.

To optimize the switch response time to output short-circuit conditions, it is very important to keep all traces as short as possible to reduce the effect of undesirable parasitic inductance.

Компания «Life Electronics» занимается поставками электронных компонентов импортного и отечественного производства от производителей и со складов крупных дистрибьюторов Европы, Америки и Азии.

С конца 2013 года компания активно расширяет линейку поставок компонентов по направлению коаксиальный кабель, кварцевые генераторы и конденсаторы (керамические, пленочные, электролитические), за счёт заключения дистрибьюторских договоров

Мы предлагаем:

- Конкуренеспособные цены и скидки постоянным клиентам.
- Специальные условия для постоянных клиентов.
- Подбор аналогов.
- Поставку компонентов в любых объемах, удовлетворяющих вашим потребностям.
- Приемлемые сроки поставки, возможна ускоренная поставка.
- Доставку товара в любую точку России и стран СНГ.
- Комплексную поставку.
- Работу по проектам и поставку образцов.
- Формирование склада под заказчика.
- Сертификаты соответствия на поставляемую продукцию (по желанию клиента).
- Тестирование поставляемой продукции.
- Поставку компонентов, требующих военную и космическую приемку.
- Входной контроль качества.
- Наличие сертификата ISO.

В составе нашей компании организован Конструкторский отдел, призванный помогать разработчикам, и инженерам.

Конструкторский отдел помогает осуществить:

- Регистрацию проекта у производителя компонентов.
- Техническую поддержку проекта.
- Защиту от снятия компонента с производства.
- Оценку стоимости проекта по компонентам.
- Изготовление тестовой платы монтаж и пусконаладочные работы.
