

## General Description

The MAX40010 evaluation kit (EV kit) provides a proven design to evaluate the MAX40010 dual-channel, high-precision, high-voltage, current-sense amplifier. This EV kit demonstrates the MAX40010 in a 5-PIN SOT-23 package.

The EV kit PCB comes with a MAX40010TAWT+ installed, which is the 20V/V gain version. Other gain options are available. Contact the factory for the pin-compatible MAX40010LAWT+ ( $G = 12.5V/V$ ), MAX40010FAWT+ ( $G = 50V/V$ ), and MAX40010HAWT+ ( $G = 100V/V$ ).

## EV Kit Contents

- MAX40010 EV Kit Board

## Features

- Precision, Real-Time Current Monitoring
- +2.7V to +76V Input Common-Mode Range
- Proven PCB Layout
- Fully Assembled and Tested

Ordering Information appears at end of data sheet.

## Quick Start

### Required Equipment

The following items are required for operation:

- MAX40010 EV kit
- +3.3V, 1A DC power supply
- +5V, 3A DC power supply
- An electronic load capable of sinking 3A (i.e., HP6060B)
- Two digital voltmeters

### Procedure

The MAX40010 EV kit is fully assembled and tested. Follow the steps below to verify the board operation.

**Caution: Do not turn on power supply or the electronic load until all connections are made.**

- 1) Connect the positive terminal of the +3.3V supply to the VDD test point and the negative terminal of the supply to the nearest GND test point.
- 2) Connect the positive terminal of the +5V supply to the VSENSE+ test point and the negative terminal of the supply to the nearest GND test point.
- 3) Set the electronic load to sink 2.5A.
- 4) Connect the positive terminal of the electronic load to the VSENSE- test point and the negative terminal of the supply to the nearest GND test point.
- 5) Connect the first voltmeter between test points RS+ and RS- to measure  $V_{SENSE}$ .
- 6) Connect the second voltmeter between VOUT and the nearest GND test points.
- 7) Turn on the power supplies.
- 8) Enable the electronic load.
- 9) Verify that the first voltmeter displays 125mV and the second voltmeter displays 2.5V.

### Detailed Description of Hardware

The MAX40010 EV kit provides a proven design to evaluate the MAX40010 high-side, dual-channel, current-sense amplifier, which offers precision accuracy specifications of input offset voltage ( $V_{OS}$ ) less than  $12\mu V$  (max) and gain error less than 0.1% (max).

### Applying the $V_{RS+}$ Supply and the Load

The EV kit is installed with a MAX40010TAWT+, which has a 20V/V gain. The current-sense resistors ( $R_{SENSE}$ ) value is  $0.05\Omega$  with  $\pm 0.5\%$  tolerance. The  $V_{OUT}$  for each channel given by:

$$V_{OUT} = I_{LOAD} \times R_{SENSE} \times A_V$$

where  $A_V$  is the gain and  $I_{LOAD}$  is the current load applied to the device. Normal operating  $V_{RS+}$  and  $V_{RS-}$  range is 2.7V to 76V.

### Measuring the Load Current

The load current is measured as a voltage drop ( $V_{SENSE}$ ) across an external sense resistor. This voltage is then amplified by the current-sense amplifier and presented at its  $V_{OUT}$  pin. Like all differential amplifiers, the output voltage has two components of error (an offset error and a gain error). The offset error affects accuracy at low currents and a gain error affects accuracy at large currents—both errors effect accuracy at intermediate currents. By minimizing both offset and gain errors, accuracy can be optimized over a wide dynamic range.

For pricing, delivery, and ordering information, please contact Maxim Direct at 1-888-629-4642, or visit Maxim Integrated's website at [www.maximintegrated.com](http://www.maximintegrated.com).

*Maxim Integrated cannot assume responsibility for use of any circuitry other than circuitry entirely embodied in a Maxim Integrated product. No circuit patent licenses are implied. Maxim Integrated reserves the right to change the circuitry and specifications without notice at any time.*

Компания «Life Electronics» занимается поставками электронных компонентов импортного и отечественного производства от производителей и со складов крупных дистрибьюторов Европы, Америки и Азии.

С конца 2013 года компания активно расширяет линейку поставок компонентов по направлению коаксиальный кабель, кварцевые генераторы и конденсаторы (керамические, пленочные, электролитические), за счёт заключения дистрибьюторских договоров

Мы предлагаем:

- Конкуренспособные цены и скидки постоянным клиентам.
- Специальные условия для постоянных клиентов.
- Подбор аналогов.
- Поставку компонентов в любых объемах, удовлетворяющих вашим потребностям.
- Приемлемые сроки поставки, возможна ускоренная поставка.
- Доставку товара в любую точку России и стран СНГ.
- Комплексную поставку.
- Работу по проектам и поставку образцов.
- Формирование склада под заказчика.
- Сертификаты соответствия на поставляемую продукцию (по желанию клиента).
- Тестирование поставляемой продукции.
- Поставку компонентов, требующих военную и космическую приемку.
- Входной контроль качества.
- Наличие сертификата ISO.

В составе нашей компании организован Конструкторский отдел, призванный помогать разработчикам, и инженерам.

Конструкторский отдел помогает осуществить:

- Регистрацию проекта у производителя компонентов.
- Техническую поддержку проекта.
- Защиту от снятия компонента с производства.
- Оценку стоимости проекта по компонентам.
- Изготовление тестовой платы монтаж и пусконаладочные работы.
