

**PI6C49S1510A**

**High Performance Differential Fanout Buffer**

**Features**

- 10 differential outputs with 2 banks
- User configurable output signaling standard for each bank: LVDS or LVPECL or HCSL
- LVC MOS reference output up to 200MHz
- Up to 1.5GHz output frequency for differential outputs
- Ultra low additive phase jitter: < 0.02 ps (typ) (differential 156.25MHz, 12KHz to 20MHz integration range); < 0.01 ps (typ) (differential 156.25MHz, 10kHz to 1MHz integration range)
- Selectable reference inputs support either single-ended or differential or Xtal
- Low skew between outputs within banks (<40ps)
- Low delay from input to output (Tpd typ. < 0.9ns)
- Separate Input output supply voltage for level shifting
- 2.5V / 3.3V power supply
- Industrial temperature support
- TQFN-48 package

**Description**

The PI6C49S1510A is a high performance fanout buffer device which supports up to 1.5GHz frequency. It also integrates a unique feature with user configurable output signaling standards on per bank basis which provide great flexibilities to users. The device also uses Pericom's proprietary input detection technique to make sure illegal input conditions will be detected and reflected by output states. This device is ideal for systems that need to distribute low jitter clock signals to multiple destinations.

**Applications**

- Networking systems including switches and Routers
- High frequency backplane based computing and telecom platforms

### Phase Noise and Additive Jitter

Output phase noise (Dark Blue) vs Input Phase noise (light blue)

Additive jitter is calculated at 156.25MHz~27fs RMS (12kHz to 20MHz). Additive jitter =  $\sqrt{(\text{Output jitter}^2 - \text{Input jitter}^2)}$

### Total phase jitter with 25MHz XTAL ~ 264fs RMS (12kHz ~20MHz)

## Application Information

### Wiring the differential input to accept single ended levels

Figure 1 shows how the differential input can be wired to accept single ended levels. The reference voltage  $V_{REF} = V_{DD}/2$  is generated by the bias resistors R1, R2 and C1. This bias circuit should be located as close as possible to the input pin. The ratio of R1 and R2 might need to be adjusted to position the  $V_{REF}$  in the center of the input voltage swing. For example, if the input clock swing is only 2.5V and  $V_{DD} = 3.3V$ ,  $V_{REF}$  should be 1.25V and  $R1/R2 = 0.609$ .

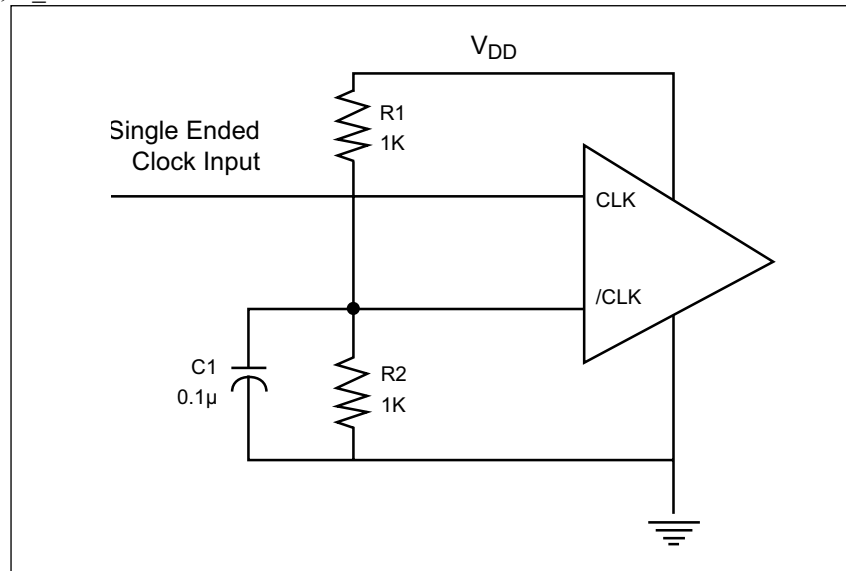

Figure 1. Single-ended input to Differential input device

## Power Supply Filtering Techniques

As in any high speed analog circuitry, the power supply pins are vulnerable to random noise. To achieve optimum jitter performance, power supply isolation is required. All power pins should be individually connected to the power supply plane through vias, and 0.1µF and 1µF bypass capacitors should be used for each pin.

### Clock IC Crystal loading cap. design guide

CL = crystal spec. loading cap.

C<sub>in/out</sub> = (3~5pF) of IC pin cap.

C<sub>b</sub> = PCB trace (2~4pF)

C<sub>1,C2</sub> = load cap. of design

R<sub>d</sub> = 50 to 100ohm drive level limit

Design guide:  $C_1=C_2=2 * CL - (C_b + C_{in/out})$  to meet target +/-ppm < 20 ppm

Example1: Select CL=18 pF crystal,  $C_1=C_2=2*(18pF) - (4pF+5pF)=27pF$ , check datasheet too

Example2: For higher frequency crystal (=>20MHz), can use formula  $C_1=C_2=2*(CL-6)$ , can do fine tune of C<sub>1</sub>, C<sub>2</sub> for more accurate ppm if necessary

#### **LIFE SUPPORT**

Diodes Incorporated products are specifically not authorized for use as critical components in life support devices or systems without the express written approval of the Chief Executive Officer of Diodes Incorporated. As used herein:

A. Life support devices or systems are devices or systems which:

1. are intended to implant into the body, or
  2. support or sustain life and whose failure to perform when properly used in accordance with instructions for use provided in the labeling can be reasonably expected to result in significant injury to the user.
- B. A critical component is any component in a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or to affect its safety or effectiveness.

Customers represent that they have all necessary expertise in the safety and regulatory ramifications of their life support devices or systems, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of Diodes Incorporated products in such safety-critical, life support devices or systems, notwithstanding any devices- or systems-related information or support that may be provided by Diodes Incorporated. Further, Customers must fully indemnify Diodes Incorporated and its representatives against any damages arising out of the use of Diodes Incorporated products in such safety-critical, life support devices or systems.

Компания «Life Electronics» занимается поставками электронных компонентов импортного и отечественного производства от производителей и со складов крупных дистрибьюторов Европы, Америки и Азии.

С конца 2013 года компания активно расширяет линейку поставок компонентов по направлению коаксиальный кабель, кварцевые генераторы и конденсаторы (керамические, пленочные, электролитические), за счёт заключения дистрибьюторских договоров

Мы предлагаем:

- Конкурентоспособные цены и скидки постоянным клиентам.
- Специальные условия для постоянных клиентов.
- Подбор аналогов.
- Поставку компонентов в любых объемах, удовлетворяющих вашим потребностям.
- Приемлемые сроки поставки, возможна ускоренная поставка.
- Доставку товара в любую точку России и стран СНГ.
- Комплексную поставку.
- Работу по проектам и поставку образцов.
- Формирование склада под заказчика.
- Сертификаты соответствия на поставляемую продукцию (по желанию клиента).
- Тестирование поставляемой продукции.
- Поставку компонентов, требующих военную и космическую приемку.
- Входной контроль качества.
- Наличие сертификата ISO.

В составе нашей компании организован Конструкторский отдел, призванный помогать разработчикам, и инженерам.

Конструкторский отдел помогает осуществить:

- Регистрацию проекта у производителя компонентов.
- Техническую поддержку проекта.
- Защиту от снятия компонента с производства.
- Оценку стоимости проекта по компонентам.
- Изготовление тестовой платы монтаж и пусконаладочные работы.
